Re: Tariff Filings by all Telephone Companies Regarding Reclassification of  
Pay Telephone Service as Required by FCC Order 96-439  
Docket No. 97-00409

Dear Mr. Waddell:

Please accept for filing the original and thirteen copies of the Rebuttal Testimony of Don Wood filed on behalf of the Tennessee Payphone Owners Association in the above-captioned proceeding. Copies have been provided to parties of record.

Very truly yours,

BOULT, CUMMINGS, CONNERS & BERRY, PLC

REBUTTAL TESTIMONY

OF

DON J. WOOD

ON BEHALF OF TENNESSEE PAYPHONE OWNERS ASSOCIATION

---

October 6, 2000

1 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

2 A. My name is Don J. Wood. My business address is 4625 Alexander Drive, Suite 125,  
3 Alpharetta, Georgia 30022.

4  
5 Q. ARE YOU THE SAME DON J. WOOD WHO PRESENTED DIRECT TESTIMONY  
6 ON BEHALF OF THE TPOA IN THIS PROCEEDING?

7 A. Yes.

8

9 Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

10 A. The purpose of my testimony is to describe and respond to the September 15, 2000 filings  
11 made by BellSouth Telecommunications, Inc. ("BellSouth"), United Telephone  
12 Southeast, Inc. ("UTSE"), Citizens Telecommunications Company of Tennessee and  
13 Citizens Telecommunications Company of the Volunteer State ("Citizens"), collectively  
14 "the ILECs." Specifically, I will explain whether, based the information provided by  
15 each ILEC, the Authority has the information necessary to establish rates for payphone  
16 access services that comply with the FCC's stated requirements.

17

18 Q. HAVE EACH OF THE ILECS PRESENTED COMPARABLE COST INFORMATION?

19 A. No. There is a wide disparity in both the amount and relevance of the cost data supplied

1 by each company. In order to determine whether each ILEC's proposed rates are  
2 compliant with the FCC's four part test (e.g. payphone rates must be cost based,  
3 consistent with the requirements of section 276 of the Act, nondiscriminatory, and  
4 consistent with the Computer III tariffing guidelines), the Authority must have before it a  
5 properly performed calculation of each ILEC's direct costs (calculated pursuant to a  
6 forward-looking economic cost methodology) and overhead costs (calculated on a  
7 forward-looking, efficient basis).

8  
9 Q. HAS CITIZENS PROVIDED THE NECESSARY INFORMATION TO THE  
10 AUTHORITY?

11 A. Yes. Citizens is the only ILEC that included both essential pieces of information in its  
12 filing. The attachment to the testimony of Scott Kitchen shows the direct costs  
13 (calculated as TSLRIC) and Citizen's calculation of overhead costs. It is important to  
14 note, however, that not all elements of Mr. Kitchen's analysis are necessary for all types  
15 of payphone lines. He includes in his total cost for each company a "coin supervision  
16 enabled line card" which is necessary only for a "smart" line. For the "dumb" line  
17 purchased by TPOA members, only the Service Line and Switching & Transport costs  
18 should be included in the rate. It is also important to note that the costs calculated by  
19 Citizens are jurisdictionally unseparated costs, and therefore any rate based on these costs

1           must be set with consideration of the interstate line charges that may be applicable to the  
2           line.<sup>1</sup> With only these two caveats, however, the information provided by Citizens can be  
3           used to establish rates for payphone access services that are consistent with the FCC's  
4           requirements.<sup>2</sup>

5  
6    Q.     HAS UTSE PROVIDED THE NECESSARY INFORMATION TO THE AUTHORITY?

7    A.     No. UTSE represents the opposite end of the spectrum from Citizens. As UTSE witness  
8           Jeffrey Caswell states in his testimony, UTSE has refused to provide either an appropriate  
9           measure of direct costs or a calculation of overhead costs in its presentation. Instead, the  
10          company has elected to provide a measure of embedded direct costs and has presented no  
11          calculation at all of overhead costs. As a result, the Authority has no basis upon which to  
12          establish payphone access rates consistent with the FCC's four part test.

13  
14   Q.     PLEASE EXPLAIN WHY UTSE'S CALCULATION OF DIRECT COSTS IS

---

<sup>1</sup> The rationale for considering these interstate charges when establishing intrastate rates is described in detail at pages 20-30 of my direct testimony.

<sup>2</sup> The cost data provided by Mr. Kitchen includes both access line and local usage costs. These costs can and should be used to develop a flat rated payphone access service compliant with the FCC's requirements. Because Citizens did not provide a separate cost of local usage on a per-minute basis, the cost data provided is insufficient to produce a measured rate.

1           INAPPROPRIATE.

2    A.     As Mr. Caswell points out at page 4 of his testimony, UTSE has presented “an embedded  
3           study based on Part 36 jurisdictionally separated non-toll embedded cost of an access line  
4           and local usage.” He goes on to argue at page 5 that “the new services test certainly does  
5           not require that direct costs be based on forward-looking economic cost estimates.” Mr.  
6           Caswell’s assertion is wrong for two reasons: the FCC’s requirements for the pricing of  
7           payphone access services are not limited to the so-called “new services test,” and – even  
8           if it were so limited -- the FCC has been clear in previous orders that economic costs *are*  
9           required.

10                 In addition to the application of the new services test, the FCC has set forth an  
11           independent requirement that rates for payphone access services be cost based. While the  
12           requirements of section 252 of the Act do not apply to payphone access services, it is  
13           difficult to draw a conceptual distinction between the phrases “cost based” (the FCC  
14           payphone requirement) and “based on cost” (the section 252 requirement that the FCC  
15           interpreted to mean forward-looking economic costs). In addition, the FCC clarified at  
16           paragraph 9 of its *Wisconsin Order*<sup>3</sup> that “costs must be determined by the use of an  
17           appropriate forward-looking, economic cost methodology that is consistent with the  
18           principles the Commission set forth in the Local Competition First Report and Order.”

1           Even if the FCC had not set forth a clear requirement that cost based rates must be  
2           based on forward-looking economic costs, Mr. Caswell would still be incorrect. The  
3           FCC has been clear that when calculating rates for services to be offered to competitors  
4           pursuant to the new services test, the FCC has stated that “we recognize that competition  
5           depends on the ability of competitors to purchase LEC facilities at rates that reflect  
6           economic costs, and not rates that are calculated to deter entry by efficient providers.”<sup>4</sup>

7  
8   Q.   MR. CASWELL DEFENDS UTSE’S FAILURE TO PROVIDE A CALCULATION OF  
9           OVERHEAD COSTS BY CITING TO AN FCC ORDER. IS HIS ASSERTION  
10          VALID?

11   A.   Absolutely not. Mr. Caswell has chosen to excerpt only a portion of the FCC’s language  
12          from the order in question while omitting important sentences, and in doing so has made  
13          an argument that is overtly misleading. Mr. Caswell’s support for UTSE’s overhead  
14          loadings comes from a cite to the FCC’s October 1997 Memorandum Opinion and  
15          Order,<sup>5</sup> in which the FCC found that the rates for certain features offered by Bell Atlantic

---

<sup>3</sup> Order CCB/CPD No. 00-1, March 2, 2000.

<sup>4</sup> Local Exchange Carriers’ Rates, Terms, and Conditions for Expanded Interconnection Through Virtual Collocation for Special Access and Switched Transport, CC Docket No. 94-97, Phase I, Report and Order, 10 FCC Rcd 6375, 6404 (1995) (“*Virtual Collocation Overhead Prescription Order*”).

<sup>5</sup> *Memorandum Opinion and Order*, Local Exchange Carrier’s Payphone Functions and Features, 12 FCC

1           were reasonable at 3.4 to 4.8 times cost. Mr. Caswell completely forgets to mention,  
2           however, that the FCC stated clearly at paragraph 13 that the basis for its conclusion that  
3           those overhead loadings did not “produce unreasonable rates” for the features in question  
4           was that “these services are provided either at very low rates or at no charge,” and noted  
5           in a footnote that “the revised rates range from no charge for two of the services to a  
6           monthly rate of \$.015 for two other proposed services.” When determining Mr. Caswell’s  
7           credibility in this regard, it is perhaps also worth noting that he cites a portion of  
8           paragraph 13 of the FCC Order, but chose to remove a sentence and replace it with an  
9           ellipse. The sentence that Mr. Caswell chose to hide from the Authority is an important  
10          one, however: “In particular, we note that these services are provided either at very low  
11          rates or at no charge.”

12                 Equally importantly, Mr. Caswell fails to mention the FCC’s concluding sentence  
13          in the paragraph that he cites: “We do not find that our determination here concerning  
14          overhead loadings for Bell Atlantic’s provision of payphone features and functions will  
15          necessarily be determinative in evaluating overhead loadings for other services.”  
16

17    Q.     IN THE ABSENCE OF THE RELEVANT COST DATA, WHAT SHOULD THE

---

Rcd 17996, 18002 paragraph 13 (1997).

1            AUTHORITY ORDER IN THIS PROCEEDING FOR UTSE?

2    A.     The Authority should order UTSE to produce an appropriate cost study for payphone  
3            access service, including a calculation of the forward-looking economic direct costs and a  
4            calculation of the forward-looking efficient level of overhead costs.    Until UTSE  
5            produces the appropriate cost studies, rates should be set at a proxy level equal to the  
6            rates adopted for BellSouth in this proceeding.

7  
8    Q.     HAS BELL SOUTH PROVIDED THE NECESSARY INFORMATION TO THE  
9            AUTHORITY?

10   A.     In part, yes.   BellSouth's cost submission falls midway between that of Citizens and that  
11            of UTSE.   BellSouth has provided direct cost information that it asserts was calculated  
12            pursuant to a TSLRIC methodology.   My review of this data indicates that, with minor  
13            adjustments, this direct cost data can be used.   BellSouth has opted to provide no  
14            overhead cost data, however, and has elected to take the position that any level of  
15            overhead in its rates for Pay Telephone Access Service ("PTAS") is acceptable and  
16            compliant with the FCC's requirements.

17  
18   Q.     DOES BELL SOUTH AGREE THAT THE FCC'S FOUR PART TEST SHOULD  
19            APPLY TO ITS INTRASTATE RATES AT ISSUE IN THIS PROCEEDING?

1     A.     The limits of BellSouth's understanding of the requirements set forth in the FCC  
2           *Payphone Orders* is difficult to ascertain. At page 5 of his testimony, Mr. Sanders  
3           describes all four parts of the FCC's four part test.

4                 Inexplicably, after citing to the FCC orders which include descriptions of  
5           the four part test and acknowledging each element of the test in his deposition, the  
6           testimony of Mr. Sanders is limited to a discussion of BellSouth's assertion that  
7           the existing rates comply with the fourth requirement (the so-called "new services  
8           test"). The BellSouth testimony offers no further discussion whatsoever of the  
9           remaining three requirements.

10                Instead, the testimony of Mr. Sanders and Ms. Caldwell outlines what is  
11           clearly BellSouth's strategy in this case: unable to make a credible demonstration  
12           that the existing payphone access service rates meet the FCC requirements,  
13           BellSouth is attempting to unilaterally rewrite the standard to include only one  
14           part of the four part test, and then to unilaterally rewrite that single standard in a  
15           way that renders it meaningless. Only by doing both of these things can  
16           BellSouth make a straight-faced argument that the existing Tennessee PTAS rates  
17           comply with any standard.

18                At page 2 of his testimony, Mr. Sanders states that the purpose of his  
19           testimony is to demonstrate that BellSouth's tariffed rates for PTAS "comply with

1 the FCC's 'new services' test." He makes no reference to whether the existing  
2 rates are cost based, nondiscriminatory, or consistent with the objectives of  
3 section 276 of the Act. Ms. Caldwell has taken a similar position in other state  
4 proceedings. For example, Ms. Caldwell was recently deposed in the proceeding  
5 initiated by the Louisiana Public Service Commission to determine the  
6 appropriate level of BellSouth's PTAS rates.<sup>6</sup> When asked on several occasions  
7 in her deposition (e.g. p. 9, 36-37) if the results of her cost study could be used to  
8 establish or demonstrate cost based rates, Ms. Caldwell – BellSouth's costing  
9 expert – suggested that she was confused by the concept of a "cost based rate"  
10 and did not understand the term. Clearly, Ms. Caldwell was willing to go to great  
11 lengths to avoid acknowledging that the existing tariffed rates for payphone  
12 access services bear absolutely no relationship to the costs that she calculated in  
13 her study.

14  
15 Q. DOES BELLSOUTH AGREE THAT THESE ARE THE THREE RELEVANT  
16 CATEGORIES OF COSTS TO BE CONSIDERED IN THIS PROCEEDING?

17 A. Apparently yes, although the testimony on this issue is inconsistent. At pages 4-5 of her

---

<sup>6</sup> A complete copy of the transcript of Ms. Caldwell's deposition (with proprietary information removed) is attached as Exhibit DJW-2 to this testimony.

1 testimony, Ms. Caldwell defines and describes each category of cost. She apparently  
2 agrees that direct costs should be considered by the Commission, but believes that shared  
3 and common costs should be “never” be considered.

4 In order to apply the FCC’s requirements that PTAS rates be cost based and  
5 compliant with the new services test, the Authority must consider each of these categories  
6 of costs. Specifically, the rates for PTAS service should equal -- and should under no  
7 circumstances be greater than -- the total of the direct, shared, and common costs that  
8 BellSouth *demonstrates* are reasonable and appropriate.

9  
10 Q. DOES BELL SOUTH AGREE THAT A FORWARD-LOOKING ECONOMIC COST  
11 METHODOLOGY SHOULD BE APPLIED WHEN DETERMINING THE  
12 RELEVANT COSTS FOR THE ELEMENTS OF PAYPHONE ACCESS SERVICES?

13 A. Apparently yes. At page 4 of her testimony, Ms. Caldwell describes the methodology  
14 used to perform the cost study she is sponsoring as a “long run incremental cost  
15 methodology,” and states that “this is the same methodology BellSouth has utilized in  
16 developing the cost support for tariff filings in Tennessee for many years.”

17  
18 Q. MR. SANDERS ARGUES THAT THE FCC HAS STATED THAT THE UNE

---

1       PRICING STANDARDS SHOULD NOT BE APPLIED TO PAYPHONE ACCESS  
2       SERVICES. IS HE RIGHT?

3    A.    Absolutely not. At pages 6-7 of his testimony, Mr. Sanders provides as the sole basis for  
4       the BellSouth position a partial quote from the FCC's Order in FCC 96-388. In doing so,  
5       Mr. Sanders fails to provide the Authority with other relevant information that serves to  
6       put his partial quote into context. First, he fails to note that the section of the order in  
7       which paragraph 147 is found is not related to costs and pricing, but instead addresses a  
8       request by a particular provider for payphone access services to be unbundled into their  
9       UNE components. The title of the section, which appears immediately above paragraph  
10      147 in the FCC's order, is "Unbundling of Payphone Services." Second, Mr. Sanders has  
11      elected to replace a relevant portion of the cited sentence with an ellipse. The complete  
12      sentence as written by the FCC contains the phrase "as proposed by AT&T." When the  
13      AT&T proposal referred to by the FCC is reviewed, it become clear that AT&T was  
14      requesting that the elements of payphone access services be provided on an unbundled  
15      basis in a manner to similar to how UNEs are provided. The TPOA is making no such  
16      request in this proceeding; TPOA members are willing to continue to purchase payphone  
17      access service (specifically PTAS service) as a tariffed service rather than as unbundled  
18      elements, but wish to do so at rates consistent with the FCC's requirements.

19           Mr. Sanders' conclusion at page 7 of his testimony that "therefore, the costing and

1 pricing standards set forth in sections 251 and 252 of the Act are inappropriate in this  
2 proceeding” has no foundation in the language he cites. The FCC rejected AT&T’s  
3 request to purchase payphone access service as unbundled elements, but in no way stated  
4 that the costing methodology utilized to determine cost based rates for UNEs could not  
5 also be used to develop cost based rates for payphone access service. In fact, a more  
6 recent Order issued by the Competitive pricing Division of the FCC’s Common Carrier  
7 Bureau states just the opposite: “[c]osts must be determined by the use of an appropriate  
8 forward-looking economic cost methodology that is consistent with the principles the  
9 Commission set forth in the Local Competition First Report and Order.”<sup>7</sup> This Order was  
10 described in detail in my direct testimony, as has previously been provided to the  
11 Authority by TPOA in this proceeding. The bottom line is that at contrary to the  
12 suggestion is Mr. Sanders’ partial quote, the FCC has at no time prohibited the use of the  
13 TELRIC/TSLRIC methodology set forth ins its Local Competition Order and  
14 corresponding rules. To the contrary, the Common Carrier Bureau has stated that this  
15 costing methodology must be used.

16  
17 Q. HAS BELLSOUTH PROVIDED ITS CALCULATION OF THE COST OF A LOCAL  
18 LOOP WITH BUSINESS/PTAS LINE CHARACTERISTICS IN THIS PROCEEDING?

---

<sup>7</sup> Order in CCB/CPD No. 00-1, Released March 2, 2000, paragraph 9.

1 A. No. While the BellSouth loop cost model automatically produces this information, it was  
2 not included in the documentation to the cost study produced in this proceeding.

3 It is interesting to note that in the cost study of payphone access services that she  
4 sponsored in other states, Ms. Caldwell included this information. Exhibit DJW-3  
5 illustrates how the information in BellSouth's cost studies for payphone access lines has  
6 been reduced over time, so that this Authority is being presented with only a fraction of  
7 the information provided to other state regulators. I have included in DJW-3 the  
8 summary pages from BellSouth's North Carolina (dated 9/98), South Carolina (dated  
9 10/98), Louisiana (dated 4/99), and Tennessee (September 00) cost studies. All  
10 proprietary information has been removed from these pages.

11  
12 Q. ARE THERE OTHER PAYPHONE-SPECIFIC COSTS THAT THE AUTHORITY  
13 SHOULD CONSIDER?

14 A. Yes. One of the reasons that BellSouth witnesses argue against the use of costs  
15 developed in investigations into UNE costs is that UNEs are wholesale services while  
16 payphone access services are provided as retail services. As a result, it is appropriate to  
17 consider any additional costs that BellSouth demonstrates are caused by the provisioning  
18 of payphone access services as retail service.

19 In her Louisiana deposition (DJW-2), Ms. Caldwell stated that the Payphone

1       Product Line Costs included in her cost study represent “all of the retail costs associated  
2       with payphones.” If properly documented, therefore, it would be reasonable to include  
3       these costs in the cost based rates for payphone access services, and by doing the concern  
4       expressed by both Mr. Sanders and Ms. Caldwell would be addressed.

5               Unfortunately, Ms. Caldwell’s cost study fails to demonstrate either the existence  
6       or magnitude of these costs. The payphone product line costs included in the cost study  
7       fall under two categories: labor and other. Regarding the labor costs, Ms. Caldwell was  
8       unable in her deposition (p. 45) to describe what certain individuals that account for  
9       approximately 10% of the reported cost actually do for payphone service providers, and  
10      described individuals that account for approximately 50% of the reported cost as “BST  
11      employees that handle selling to our pay phone providers.” It is unclear why BellSouth  
12      needs to spend the amount of money reported in order to sell payphone access services to  
13      a captive base of customers who have few, if any, alternative providers. In the end, Ms.  
14      Caldwell has justified only half of the labor costs she reports.

15              The costs reported in the “other” have an even shakier foundation. Ms. Caldwell  
16      describes these costs as “BellSouth sponsored payphone conferences and publications,”  
17      and indicates that it is her understanding – based on information provided to her by  
18      subject matter experts – that the costs are based on a projection of these costs over the  
19      next three years. Three facts should be considered when evaluating these reported

1           “conferences and publications” costs. First, it would be interesting to find out whether  
2           the BellSouth representatives at these payphone conferences, upon offering to buy a  
3           customer dinner or a drink, made it clear that the cost of doing so would be included in  
4           that customer’s monthly bill. If so, the customer may have declined the offer, an act  
5           which should result over time in lower rates for payphone access services. Second, Ms.  
6           Caldwell’s subject matter experts have apparently failed to notify Ms. Caldwell that  
7           BellSouth is no longer sponsoring events at payphone conferences. As a result, the  
8           forward looking budget for these activities should now be zero. Third, while Ms.  
9           Caldwell refers to a portion of these costs as supporting unspecified BellSouth  
10          “publications,” I have been unable to find a payphone provider operating in the southeast  
11          that is aware of any such “publications” being provided by BellSouth.

12  
13   Q.     SHOULD ADJUSTMENTS BE MADE TO ANY OTHER BELLSOUTH RATES?

14   A.     Other BellSouth rates for payphone access services may also require adjustment in order  
15          to comply with the FCC requirements. It is important to note that while BellSouth  
16          charges TPOA payphone-service-provider members nonrecurring charges (e.g.,  
17          installation and/or service initiation charges) related to the provisioning of payphone  
18          access services, it has not offered any nonrecurring cost data in support of these rates.  
19          The burden of justifying these rates continues to rest with BellSouth, however.

1

2 Q. YOUR TESTIMONY MAKES IT CLEAR THAT BELL SOUTH HAS NOT  
3 DEMONSTRATED THAT THE EXISTING RATES FOR PAYPHONE ACCESS  
4 SERVICE ARE COST BASED. HAS BELL SOUTH ARGUED THAT THE RATES  
5 NEVERTHELESS MEET SOME DEFINITION OF "COST BASED"?

6 A. Incredibly, yes. It has been my expectation that while there may be some disagreement  
7 regarding the details, there would be an agreement among the parties that the phrase 'cost  
8 based' means – at a minimum – that the rates bear some relationship to the cost. In each  
9 of the other state proceedings that I have participated in, including other BellSouth states,  
10 there has been this minimum (one might argue minimal) level of common ground. In this  
11 proceeding, BellSouth has decided to take the position that cost based rates need have no  
12 relationship whatsoever to cost.<sup>8</sup>

13

14 Q. WHAT IS THE BASIS FOR YOUR UNDERSTANDING OF MS. CALDWELL'S  
15 DEFINITION OF A COST BASED RATE?

16 A. My understanding of BellSouth's definition comes from the following questions and

---

<sup>8</sup> If a rate can exceed the cost by any amount and still be considered cost based, it is unclear why BellSouth went to the trouble of performing a cost study at all. According to Ms. Caldwell's definition of cost based, the cost study results place no constraint on the maximum rate that BellSouth can charge for payphone access service.

1           answers from Ms. Caldwell's Louisiana deposition. Her definition is best understood by  
2           considering her own words:

3           Pages 9-10:

4           Q. What do you need to know and how do you arrive at the cost based rates?

5           A. I think I have a problem when we keep talking about cost based rates. I can  
6           tell you how I do my cost, and from that standpoint I can answer the question.

7           Q. Okay.

8           A. ...When I'm looking at a service, what I really am trying to do is to determine,  
9           first of all, the price floor of my service, in other words, the value for which  
10          BellSouth should not price below...And then we should have a contribution  
11          over and above that to cover your joint and common cost. And that's how the  
12          costs are the foundation in those analyses.

13  
14          Page 40:

15          Q. How far from the actual cost, in your opinion, could you differ or increase and  
16          still be a cost based rate?

17          A. I don't think there is any measure for that. As long as the customer is willing  
18          to pay and that's what the market will bear and you're covering your direct

---

1 costs, then you're fine.

2 Q. So buyer beware?

3 A. Not necessarily. But as long as the customer is willing to pay, and that's with  
4 competitive influences.

5 Q. Would 100 percent over cost as a rate be a reasonable cost based rate?

6 A. Based on my previous statement, there is no measure. There is no percentage.

7 Q. Same answer for 1000 percent?

8 A. Same Answer.

9

10 At page 60:

11 Q. Should it [the calculation of shared and common cost produced by BellSouth's  
12 cost model] be used to show whether or not it is [a] cost based –

13 A. I do not believe so.

14 Q. – rate? You don't believe so?

15 A. I do not believe so.

16 Q. Why not?

17 A. Because again, cost based – the definition I have been using is that cost

18 base[d] is you have a cost of what it incurred – excuse me – of what the

19 company incurred to provide the service. And then a contribution above that

1                   is fine. You're still at cost based as long as you're recovering your cost. It's  
2                   the foundation.

3  
4    Q.    ARE YOU AWARE OF ANY BASIS IN ECONOMIC THEORY OR PRACTICE  
5           THAT SUPPORTS THE IDEA THAT A RATE CAN BE EXCEED THE COST BY AN  
6           INFINITE AMOUNT AND STILL PROPERLY BE CHARACTERIZED AS A COST  
7           BASED RATE?

8    A.    No. To the best of my knowledge, this theory is unique to Ms. Caldwell and BellSouth.

9  
10   Q.   HAS BELLSOUTH INTRODUCED ANY OTHER NOVEL THEORIES IN ITS  
11          WITNESS' TESTIMONY IN OTHER RECENT PAYPHONE PROCEEDINGS?

12   A.    Yes. For example, Ms. Caldwell has also concluded that the "reasonable" amount of  
13          overhead to be included in a rate can – and should – be determined without regard to any  
14          calculation of the shared and common costs actually incurred. Like the theory of "no rate  
15          is so high that it is no longer cost based," the theory of "there is no such thing as an  
16          unreasonable overhead" is best understood by considering Ms. Caldwell's own words:

17               Pages 50-51:

18               Q. And the question is: What makes it a reasonable level of contribution? What  
19               is meant by a reasonable level of contribution?

1           A. I believe in terms that as long as you are making some contribution to your  
2           joint and common costs. And then the level of that amount is really measured  
3           by the market, customer willingness to pay, what the market will bear, the  
4           things we've talked about before. There is no miracle dollar amount or  
5           percentage that is reasonable.

6           Q. If a reasonable level is what a willing buyer is willing to pay, is there such a  
7           thing as an unreasonable level?

8           A. I believe in that context there wouldn't be because basically the customer is  
9           not going to pay more than the customer is willing to pay. So they would  
10          never pay an unreasonable amount.

11          Q. But the customer wouldn't know what portion they were paying for overhead,  
12          would they?

13          A. They wouldn't know, but that doesn't matter.

14  
15        Q.     ARE YOU AWARE OF ANY BASIS IN ECONOMIC THEORY OR PRACTICE  
16                THAT SUPPORTS THE IDEA THAT ANY LEVEL OF OVERHEAD LOADING IN A  
17                RATE IS REASONABLE AS LONG AS A CAPTIVE CUSTOMER IS WILLING TO  
18                PAY IT?

19        A.     No. Ms. Caldwell's theory is the antithesis of the stated purpose of section 276 of the Act

1           and the FCC's *Payphone Orders*. If payphone providers could avoid paying inflated rates  
2           to the ILECs for payphone access services, there would be no need for Congress and the  
3           FCC to place limits on the amount that ILECs charge for these services. The reality, of  
4           course, is that BellSouth currently controls the costs that are incurred by competing  
5           providers of payphone service to end users. In order for the objectives of section 276 –  
6           increased competition and widespread deployment of payphones – to be met, it is  
7           essential that the rate for payphone access services be limited to cost based levels. This is  
8           the reasoning behind both the language of the Act and the FCC Orders.

9  
10    Q.    THE FCC'S FOUR PART TEST ALSO REQUIRES PAYPHONE ACCESS RATES TO  
11           BE NONDISCRIMINATORY. DO BELL SOUTH'S PROPOSED RATES MEET THIS  
12           REQUIREMENT?

13    A.    No. As I described previously in my testimony, the failure to establish cost based  
14           intrastate rates permits BellSouth to artificially inflate the costs incurred by the  
15           competitors of its payphone operations. When properly applied, the requirement for cost  
16           based rates can help to ensure that competitors begin on an equal footing with regard to  
17           the costs of network access, and that the success of each competitor in the marketplace is  
18           a result of its ability to control other costs and successfully manage its business. Without  
19           the proper application of this requirement, the success of a given competitor may be a

1 function of its relationship to the LEC.

2 An additional form of discriminatory rates also exists. Pursuant to the existing  
3 tariffed rates, a CLEC would be able to purchase an unbundled loop from BellSouth at a  
4 rate that is lower than the price BellSouth would charge a TPOA member for a payphone  
5 access line, even though the cost to BellSouth of providing the payphone access service  
6 loop to the payphone provider is less than the cost of the unbundled local loop. This rate  
7 discrepancy would exist even though the rates for unbundled network elements and  
8 payphone access lines are both required to be cost based by the relevant provisions of the  
9 Act. This inconsistency also results in discriminatory rates.

10  
11 Q. HAS BELL SOUTH FULLY JUSTIFIED THE LEVEL OF DIRECT COSTS AND THE  
12 LEVEL OF OVERHEAD LOADINGS IN ITS PROPOSED RATES?

13 A. No. At pages 8-9 of his testimony, Mr. Sanders states that "BellSouth's rates for PTAS  
14 and Smartline are priced at levels that meet the 'new services' test." While I agree that  
15 BellSouth bears the burden of making such a demonstration pursuant to the FCC's  
16 requirement, I strenuously disagree that it has done so either through its testimony or  
17 through any cost material presented in this proceeding. Specifically, BellSouth bears the  
18 burden of demonstrating that (1) its calculation of the direct cost associated with each rate  
19 is reasonable, and (2) the amount of overhead (shared + common) cost included in each

1 rate is reasonable. To date, BellSouth has not made either demonstration.

2 With regard to direct costs, BellSouth has offered no justification for its  
3 assumption that the cost of a local loop used to provide payphone access service should  
4 be based on a mixture of residence and business line characteristics, even though  
5 BellSouth won't install a PTAS line at a residence location. In order to comply with the  
6 first (cost based rates), second (nondiscrimination), and fourth (new services test)  
7 elements of the FCC's four part test, an ILEC must present the relevant cost data and  
8 demonstrate their reasonableness. BellSouth simply has not done so in the materials  
9 presented in this case.<sup>9</sup>

10 The second step in the application of the FCC's new services test (and an integral  
11 part of demonstrating cost based rates) is to justify the overhead loadings (i.e., amount of  
12 shared and common costs) that have been included in each rate. Incredibly, BellSouth  
13 has chosen not to attempt any demonstration of the reasonableness of its overhead  
14 loadings in this proceeding. Such a tactic is unprecedented in my experience.

---

<sup>9</sup> Additional examples of rates that have no direct cost support are the nonrecurring charges (e.g., installation charges) associated with payphone access services. BellSouth has offered no cost information in support of these rates. In addition, the cost information that BellSouth has provided is incomplete and poorly documented. As described earlier in my testimony and shown in exhibit DJW-2, BellSouth included important cost information in similar filings in other states that is missing from the information presented here. BellSouth has made no effort to explain why this Commission and its Staff do not deserve the complete cost package presented elsewhere.

1           As I described in my direct testimony, other state regulators have already  
2           presented with the task before the Authority in this case. I have been directly involved in  
3           similar investigations in Colorado, Ohio, Puerto Rico, and Massachusetts, and in the  
4           BellSouth states of Florida, Louisiana, North Carolina, and South Carolina. I have also  
5           reviewed portions of the record of comparable cases in Delaware, West Virginia,  
6           Michigan, and Kentucky. Until the BellSouth filings in Louisiana and this proceeding, I  
7           have never seen an ILEC fail to provide any quantification or documentation whatsoever  
8           of the level of shared and common (overhead) costs that it believes should be included in  
9           its payphone access service rates.

10           To be clear, in other states the ILEC may or may not have made an adequate  
11           demonstration that the existing or proposed level of overhead was compliant with the  
12           requirements that the rates be cost based or consistent with the new services test. But  
13           each of them, including BellSouth in other states, at least made the effort. Here in  
14           Tennessee, BellSouth has actually gone to some effort to withhold this essential  
15           information from the Authority. Ms. Caldwell presented a comparable cost study for  
16           payphone access services in South Carolina, and utilized the same cost model, the  
17           TELRIC calculator, to produce both studies. The TELRIC calculator automatically  
18           produces a quantification of shared and common costs, and Ms. Caldwell included those

---

1 costs in her South Carolina presentation: “and then we indicated in that South Carolina  
2 study the shared and common as a separate item.” In fact, until the Louisiana case,  
3 BellSouth had produced information regarding shared and common costs in each state,  
4 just as other ILECs have done.

5 At pages 27-28 of her Louisiana deposition, Ms. Caldwell describes the step she  
6 took in order to withhold information regarding shared and common costs from this  
7 Authority: “when you get your output from the TELRIC calculator, it gives you your  
8 direct cost. Then it gives you your shared cost and the common costs...It looks like they  
9 set them all to zero. So the shared cost becomes zero. And then you’ll notice the  
10 common cost factor was set to 1 and is multiplied on this page. So what you basically  
11 have out of the TELRIC calculator is the direct cost by doing that.” At pages 58, 59, and  
12 61 of her deposition, Ms. Caldwell clarifies that BellSouth could have provided this  
13 information to the Authority, but elected not to.

14  
15 Q. HAS TPOA REQUESTED THAT BELL SOUTH PROVIDE THIS INFORMATION  
16 REGARDING ITS SHARED AND COMMON COSTS?

17 A. Yes. TPOA has issued data requests to BellSouth requesting this specific information.

1 To date, BellSouth has refused to provide this information.<sup>10</sup>

2  
3 Q. HOW SHOULD THE AUTHORITY DEAL WITH THIS LACK OF INFORMATION?

4 A. As described above, BellSouth has the burden of showing that its existing rates for  
5 payphone access services meet each part of the FCC's four part test, including the  
6 requirements that the rates be cost based and compliant with the new services test.  
7 BellSouth has opted, for whatever reason, to provide offer no demonstration whatsoever  
8 regarding what it considers to be a reasonable level of overhead (shared and common)  
9 costs to be included in these rates. Ms. Caldwell has conceded that BellSouth took clear  
10 (and explicit) steps to set both the shared and common costs to zero in its cost study  
11 provided to this Authority.

12 When applying the FCC standard, I believe that the Authority should take  
13 BellSouth's cost information at face value and establish rates that include the total of the  
14 direct, shared, and common costs demonstrated by BellSouth to be reasonable. With no  
15 shared and common costs in the record (actually, these costs are in the record in DDC-1

---

<sup>10</sup> BelSouth argues that if it were to provide the missing shared and common costs, its TSLRIC study would somehow be transformed into a TELRIC study. This position is absurd. A given cost study is properly characterized as "TSLRIC" or "TELRIC" depending on the cost object studied (i.e. whether the cost object is a service or element). Both TSLRIC and TELRIC are direct cost methodologies, to which shared and common costs may or may not be added.

1 at a level of \$0), the rates should be no higher than the level of direct cost demonstrated  
2 by BellSouth to be reasonable.

3  
4 Q. DOES THE AUTHORITY HAVE ANY OPTION IN THIS PROCEEDING OTHER  
5 THAN ESTABLISHING RATES FOR PAYPHONE ACCESS SERVICES AT THE  
6 LEVEL OF DIRECT COSTS DEMONSTRATED TO BE REASONABLE BY  
7 BELLSOUTH?

8 A. One possible alternative is to order BellSouth to provide the information requested by  
9 TPOA in its data requests regarding the level of shared and common costs that would  
10 have been calculated by BellSouth's cost model, had BellSouth not acted to remove these  
11 costs. Of course, by doing so the Authority would be curing the defects inherent in  
12 BellSouth case, something that it is not obligated to do.

13  
14 Q. TO BE CLEAR, ARE YOU SAYING THAT THE STANDARD IN THE FCC'S  
15 *PAYPHONE ORDERS* REQUIRES THAT THE OVERHEAD LOADING IN  
16 BELLSOUTH'S INTRASTATE PAYPHONE ACCESS SERVICE RATES BE EQUAL  
17 TO THE OVERHEAD LOADING IN ITS UNE RATES?

18 A. Not at all. Parts 1 (cost based) and 4 (new services test) of the FCC's four part test do

---

1 clearly require, however, that BellSouth's rates not exceed the level of costs that it has  
2 justified to the Authority. The last level of overhead loading (i.e., total of shared and  
3 common costs) that BellSouth has justified to the Authority as appropriate for the  
4 development of cost based rates is the amount of shared and common costs added to the  
5 direct costs for UNEs. BellSouth has not offered any justification in this proceeding for a  
6 higher overhead loading for payphone access services (and in fact has given the Authority  
7 sufficient justification to order a much lower one). Absent a demonstration by BellSouth  
8 in this proceeding, the highest overhead loading that can be applied is that previously  
9 found to be reasonable and appropriate by the Authority.

10  
11 Q. IN HIS TESTIMONY, MR. SANDERS ARGUES THAT BELL SOUTH HAS AMPLY  
12 DEMONSTRATED THAT EXISTING PAYPHONE ACCESS SERVICES RATES  
13 COMPLY WITH THE NEW SERVICES TEST BY SHOWING THAT THE  
14 RELATIONSHIP BETWEEN THE RATES AND COSTS FALLS WITHIN A RANGE  
15 OF RATIOS THAT HAVE PREVIOUSLY BEEN ACCEPTED BY THE FCC. IS THIS  
16 ASSERTION CORRECT?

17 A. No. Mr. Sanders has apparently chosen its words carefully here, and with good reason.  
18 At page 9 of his testimony, he states that "BellSouth's cost/price ratios for the PTAS line  
19 and Smartline service rate levels in Tennessee fall within a range of cost/price ratios that

1           have been accepted by the FCC in interstate filings.” As Mr. Sanders correctly points  
2           out, the ILECs subject to price cap regulation by the FCC typically present such  
3           cost/price ratios when making filings subject to the new services test requirement. Where  
4           Mr. Sanders goes astray is in his effort to use this typical FCC data submission as support  
5           for BellSouth’s request that no meaningful investigation be undertaken in this  
6           proceeding.

7                     In order to fully understand the FCC's application of the new services test, it is  
8           necessary to understand the filing and investigation process. The FCC may receive  
9           hundreds of proposed rates on a given day. Resources are simply not available to  
10          evaluate each proposed cost/price relationship. As a result, the FCC only evaluates the  
11          cost/price relationships for those rates that are contested by other parties. While  
12          BellSouth may have made numerous filings consisting simply of cost/price ratios (with  
13          no additional justification) that have been “accepted” by the FCC and allowed to go into  
14          effect because they were not contested, it is simply not accurate to assert that these rates  
15          were “approved” by the FCC or affirmatively determined to be in compliance with the  
16          new services test.

17  
18    Q.     HAVE CONTESTED PRICES BEEN EVALUATED AND APPROVED BY THE FCC  
19           AS COMPLIANT WITH THE NEW SERVICES TEST?

A. Yes. I have been involved in a number of proceedings in which the FCC actually evaluated and approved overhead loadings for BellSouth services. Each of these investigations involved substantial filings by the ILECs, typically consisting of hundreds of pages of text and cost workpapers. The compliance of these contested rates with the new services test standard was not decided merely by the submission and examination of a list of cost/price ratios. A number of these cases are cited in Exhibit DJW-1 to my testimony.

Q. IF, AS BELLSOUTH ARGUES, THE MECHANICS OF THE FCC'S APPLICATION OF THE NEW SERVICES TEST IS TO SERVE AS A GUIDE, SHOULD THE AUTHORITY TREAT BELLSOUTH'S INTRASTATE RATES FOR PAYPHONE ACCESS SERVICES AS CONTESTED OR UNCONTESTED RATES?

A. The level of these rates is clearly being contested by the TPOA in this proceeding. The FCC model of full investigation should therefore apply. Mr. Sanders argues at page 10 of his testimony that “[I]n deciding whether a service meets the new services test, the FCC considers cost/price ratios for the services in question.” If it is Mr. Sanders’ understanding that such a review of cost/prices ratios represents the entirety of the FCC’s investigation into a contested new services test filing, he is simply wrong. In order to demonstrate compliance with the new services test, the FCC has consistently required the

1 ILECs to demonstrate that the overhead loading (amount of shared and common costs)  
2 included in a given rate is reasonable. To date, BellSouth has produced no cost studies in  
3 this proceeding which purport to show the level of overhead costs for payphone access  
4 services, or to show that this level is reasonable.

5 Instead, BellSouth, through Mr. Sanders' testimony, has elected to rely entirely on  
6 a series of cost/price ratios to justify its rates. Such an approach inherently fails to make  
7 the required demonstration for at least two reasons. First, a ratio analysis cannot be used  
8 to demonstrate that a given rate is "cost based." The only way to demonstrate the  
9 existence of a cost based rate is to produce properly performed cost studies of each  
10 category of cost to be included (direct, shared, and common). BellSouth has not done so.

11 Second, compliance with the new services test cannot be demonstrated by a simple  
12 showing that the cost/price ratio for a given rate is within a range of ratios previously  
13 found appropriate by the FCC.<sup>11</sup> While the FCC frequently utilizes ratio analysis as a  
14 part of its decision process when determining whether to investigate a given rate, the  
15 application of the new services test is *not* simply an exercise in comparing ratios. In  
16 order to demonstrate new services test compliance, the ILECs, including BellSouth, must

---

<sup>11</sup> As described above, there is a fundamental and necessary distinction between rates that have been allowed to go into effect and rates that have been investigated and found appropriate by the FCC. Even if only the ratios associated with investigated rates are used, such an approach cannot, by itself, be used to demonstrate compliance with the new services test.

1 show that both the calculation of the direct cost and the overhead loading are reasonable  
2 *for the rate in question.* The reasonable overhead loading for the rate or rates being  
3 investigated may ultimately bear little or no relationship to the ratios previously found  
4 reasonable for other rates. Put simply, Mr. Sanders is confusing the benchmarking  
5 method frequently used by the FCC in order to determine which rates warrant further  
6 investigation with the actual requirements of the new services test.

7 The West Virginia Public Service Commission reached similar conclusions. In  
8 that proceeding, Bell Atlantic failed to produce cost studies specific to payphone services,  
9 and instead relied simply on ratio analysis. The West Virginia PSC found that "[t]he 'new  
10 services test' clearly places the burden on the incumbent LECs to demonstrate that the  
11 service element in the intrastate payphone tariff is cost based and will not recover more  
12 than a reasonable portion of the carrier's overhead costs. See 47 C.F.R. §69.49(f)(2).  
13 BA-WV failed to meet this burden."<sup>12</sup>

14 In this proceeding, BellSouth has made the strategic decision to make no effort to  
15 meet the burden imposed by the FCC's requirements. It has produced no study of the  
16 overhead costs that it believes are reasonable, and has instead gone down the errant path  
17 of relying simply on ratio analysis.

1 Q. AT PAGES 7-8 OF HIS TESTIMONY, MR. SANDERS SUGGESTS THAT THE FCC  
2 HAS NOT PROVIDED ANY GUIDELINES AS TO HOW THE REQUIREMENTS OF  
3 ITS FOUR PART TEST ARE TO BE IMPLEMENTED. IS HE CORRECT?

4 A. No. Mr. Sanders actually takes this argument a step further, suggesting that because the  
5 FCC has not issued specific guidelines, "the Authority may apply its own best judgement  
6 in determining the proper loading factor for all of BellSouth's services, including its  
7 payphone services." This is simply not the case. In response to the congressional  
8 mandate set forth in section 276, the FCC has set forth a set of requirements that must be  
9 applied by state regulators when determining an appropriate level of rates for intrastate  
10 payphone access services. To my knowledge, there is no outstanding jurisdictional  
11 question regarding this mechanism: Congress and the FCC have established the standards  
12 to be applied, and it is the task of state regulators, including this Authority, to implement  
13 those standards.

14 This Authority certainly has the opportunity to apply its best judgement in this  
15 proceeding, but must do so within the context of the standards set forth in the FCC's  
16 *Payphone Orders*. To that end, the Authority may determine whether the amount of  
17 direct and overhead costs calculated by BellSouth are reasonable. In this proceeding,  
18 however, BellSouth has taken away the opportunity for the Authority to exercise its

---

<sup>12</sup> West Virginia Order, at pp. 14-15.

1 judgement regarding the reasonableness of BellSouth's shared and common (overhead)  
2 costs. By deciding to engage in the unprecedented act of excluding these costs from its  
3 cost study, BellSouth has given the Authority nothing to judge.

4  
5 Q. HAS THE FCC PROVIDED A DETAILED EXPLANATION OF HOW ITS  
6 STANDARDS SHOULD BE IMPLEMENTED WHEN ESTABLISHING  
7 INTRASTATE RATES?

8 A. Yes. On March 2, 2000, the Competitive Pricing Division of the FCC's Common Carrier  
9 Bureau issued Order CCB/CPD No. 00-1 ("Wisconsin Order").<sup>13</sup> This order sets forth  
10 the details of the process that certain ILECs must follow when providing information to  
11 the FCC in order to demonstrate compliance with the four part test.<sup>14</sup> While the order is  
12 specific to four Wisconsin ILECs, it does serve provide clarification in this case by  
13 answering the following question: What would the FCC require the LECs to demonstrate  
14 (and what information would be specifically required to be provided) if the FCC were  
15 apply its own standards to the rates for payphone access service.

---

<sup>13</sup> This Order has previously been provided to the Authority by the TPOA.

<sup>14</sup> The Wisconsin Public Service Commission had previously determined that it could not undertake the investigation necessary to determine if the existing rates for payphone access services in Wisconsin meet the requirements of the Act and the subsequent *Payphone Orders*. Pursuant to the Order in the Payphone Reclassification Proceeding, ILECs must then submit the necessary information to the FCC so that it can conduct the necessary investigation.

1

2 Q. ARE THE RECOMMENDATIONS SET FORTH IN THE TESTIMONY OF MR.

3 SANDERS AND MS. CALDWELL CONSISTENT WITH THE *WISCONSIN ORDER*?

4 A. No. BellSouth's position is completely at odds with this order.

5

6 Q. IS THERE EVIDENCE IN THIS PROCEEDING THAT ESTABLISHES THAT THE

7 EXISTING TENNESSEE RATES FOR PAYPHONE ACCESS SERVICES ARE NOT

8 COST BASED?

9 A. Yes. The testimony of Mr. Sanders and Ms. Caldwell makes it clear that the existing

10 rates are not cost based, and do not comply with the FCC's standards. Specifically, the

11 BellSouth witnesses state that:

12 **1. The existing rates for payphone access services include market-based influences**

13 **(e.g. a customer willingness to pay).** At page 13 of his testimony, Mr. Sanders

14 argues that "market forces" should determine a level of contribution that can be

15 considered reasonable for the purposes of the new services test." Of course, the

16 purpose of requiring a cost based rate is to mitigate BellSouth's ability to price

17 specific services based on a customer's willingness to pay an inflated rate, and to

18 instead place BellSouth and the customer/competitor on an equal footing. For this

19 reason alone, the existing rates do not comply with the requirements set forth by

1 Congress and the FCC.

2 **2. The existing rates for payphone access services contain an implicit subsidy.** At  
3 page 13 of his testimony, Mr. Sanders refers to implicit subsidies included in  
4 BellSouth's PTAS rate. When asked in her Louisiana deposition (p. 36) what portion  
5 of a cost based rate could constitute a subsidy to another service, Ms. Caldwell replied  
6 "I think, again, we're back to the term 'cost based' that keeps giving me a problem.  
7 So I can't answer that question." The answer that Ms. Caldwell is looking for here is  
8 "none": a cost based rate must reflect the cost of providing the service in question, not  
9 the cost of providing other services. For this reason alone, the existing rates do not  
10 comply with the requirements set forth by Congress and the FCC.

11 **3. The existing rates for payphone access services are not based on cost.** As Mr.  
12 Sanders points out at page 13, the existing rates were established based on Universal  
13 Service concerns. The existing rates are not based on calculations of direct and  
14 overhead costs. As a result, an independent demonstration that the existing rates are  
15 consistent with such a calculation of direct and shared costs must now be made. As I  
16 described previously in my testimony, however, BellSouth has offered no such  
17 demonstration in this proceeding. For this reason alone, the existing rates do not  
18 comply with the requirements set forth by Congress and the FCC.

19 **4. The existing rates for payphone access services were set with no consideration of**

1           **the SLC/EUCL or the PICC.** Because the costs calculated pursuant to an economic  
2           costing methodology are (by definition) not jurisdictionally separated, it is necessary  
3           to consider other rates that are specifically in place in order to recover a portion of the  
4           costs associated with payphone access services (this is also a specific requirement of  
5           the *Wisconsin Order*). Absent such a consideration, BellSouth will be permitted to  
6           double recover its costs. For this reason alone, the existing rates do not comply with  
7           the requirements set forth by Congress and the FCC.

8  
9    Q.    PLEASE SUMMARIZE YOUR CONCLUSIONS REGARDING BELL SOUTH'S  
10          EXISTING RATES FOR PAYPHONE ACCESS SERVICES.

11   A.    Faced with a requirement that its rates for payphone access services must be cost based,  
12          BellSouth has elected to admit that its rates are not cost based but instead were  
13          established without regard to cost, include subsidies to other services, and were  
14          established in order to take advantage of their competitor/customers' "willingness to pay"  
15          an inflated rate. Rather than make the necessary adjustments to the rates, BellSouth is  
16          asking this Authority to simply ignore the requirement for cost based rates.

17  
18   Q.    WHAT RATES SHOULD THE AUTHORITY ORDER TO BE TARIFFED FOR  
19          BELL SOUTH'S PTAS SERVICE THAT COMPLY WITH THE REQUIREMENTS OF

1 THE FCC'S FOUR- PART TEST?

2 A. BellSouth should be permitted to charge a rate that is no higher than the level of costs  
3 (direct and overhead) that it has demonstrated to be reasonable in this proceeding. The  
4 template for calculating a cost based monthly rate for PTAS service is given on the  
5 Summary of Results page of Exhibit DDC-1 to Ms. Caldwell's testimony:

6 Loop +  
7 Termination (switch line port) +  
8 Usage +  
9 Blocking and Screening +  
10 Billed Number Screening +  
11 Payphone Product Costs =  
12 Monthly Total

13  
14 The next step is to ascertain the level of direct costs that BellSouth has  
15 demonstrated to be appropriate for each component.

16 As described in my direct testimony, BellSouth will only provide PTAS service to  
17 a business location. For this reason, PTAS loop costs should reflect business, rather than  
18 residence, line characteristics. Ms. Caldwell indicates in her testimony that BellSouth has  
19 changed the assumed mix of residence and business line characteristics in the PTAS

1 study, but still assumes some portion of residence lines. If she had provided the mix of  
2 residence and business line characteristics used in her cost study in this proceeding, it  
3 would have been possible to calculate the costs specific to a PTAS/business line.  
4 Because she did not, it is necessary for the Authority to order BellSouth to produce a cost  
5 study with business line characteristics assumed for loop costs.<sup>15</sup>

6 Based on Ms. Caldwell's testimony given at her deposition, certain payphone  
7 product costs should also be adjusted. One portion of these costs, associated with  
8 conferences and publications, will not be incurred on a going-forward basis and should be  
9 removed. Another portion, associated with "account executives" who sell services to a  
10 captive market, should be removed.

11  
12 Q. WHAT LEVEL OF OVERHEAD COSTS SHOULD BE INCLUDED IN  
13 BELL SOUTH'S PTAS RATE?

14 A. The maximum level of overhead that can be included in the rate is that which BellSouth  
15 has demonstrated to be reasonable in this proceeding. Unfortunately, BellSouth has  
16 elected to remove the calculation of shared and common costs normally produced by its  
17 cost study, and instead has reported shared and common costs of \$0. This amount is the

---

<sup>15</sup> BellSouth's loop cost model automatically produces a separate loop cost for business line and residence line characteristics. If the Authority were to order BellSouth to produce a loop cost study based on business

1            appropriate amount to be included in the rate for PTAS.

2  
3    Q.    IS THERE ANY ALTERNATIVE METHODOLOGY AVAILABLE TO THE  
4            AUTHORITY FOR ESTABLISHING PTAS RATES IN THIS PROCEEDING?

5    A.    Yes. The Authority may take the direct cost for payphone access services as  
6            demonstrated by BellSouth, and apply an overhead loading equal to the amount last  
7            demonstrated by BellSouth to be reasonable for a cost based rate. This could be  
8            accomplished by ordering BellSouth to provide responses to TPOA's data requests.

9  
10   Q.    HAVE OTHER STATE REGULATORS UTILIZED THIS ALTERNATIVE  
11            APPROACH?

12   A.    Yes. In the absence of the necessary cost information from Bell Atlantic, the West  
13            Virginia PSC followed this course of action. Specifically, the West Virginia PSC relied  
14            on its recent investigation of Bell Atlantic's joint and common costs in order to establish a  
15            reasonable overhead loading for payphone services: "[t]here simply was insufficient  
16            evidence presented by BA-WV to justify such large overhead allocations. As Staff  
17            pointed out, the SGAT order(s) relied upon in calculating rates for payphone lines  
18            included a reasonable allocation for overhead. . In fact, the Commission's orders in those

---

line characteristics, BellSouth should have no problem complying in a timely manner.

1       proceedings established a 10.2% overhead factor to be used in establishing rates for  
2       interconnection and unbundled network elements. . .In this proceeding, BA-WV seeks an  
3       overhead contribution for payphone access lines -- not features -- ranging from 23% to  
4       92% over and above the Commission-authorized 10.2% allocation. Nowhere does BA-  
5       WV attempt to justify these overhead ranges."<sup>16</sup>

6               By electing to provide no demonstration whatsoever of the magnitude of its  
7       shared and common costs, BellSouth has placed the Authority in a comparable position in  
8       this proceeding. Absent even an attempt to justify a given level of overhead loading by  
9       BellSouth, the Authority must -- if it decides to permit BellSouth to recover an reasonable  
10      amount of overhead costs in its rates for payphone access services -- utilize the best  
11      information available to reach a decision.

12  
13   Q.     THE RATES THAT YOU ARE PROPOSING ARE LOWER THAN THE EXISTING  
14            TARIFFED RATES. SHOULD THIS BE A CONCERN TO THE AUTHORITY?

15   A.     No. Comparing the existing rates for payphone access services with these new rates is  
16            purely an apples to oranges comparison. Since these rates were established, the  
17            *Payphone Orders* implementing Section 276 of the Act created a specific --and  
18            fundamentally different -- pricing standard to be applied. Because of this change in the

---

<sup>16</sup> West Virginia Order, page 15.

1 regulatory paradigm, it is reasonable to expect the new rates for payphone access services  
2 to be both significantly different and lower than the existing rates.

3 BellSouth points out that factors other than cost have been considered when  
4 establishing the existing payphone access services rates, and specifically noted that the  
5 existing rates were set residually during a period of rate of return regulation and include  
6 implicit subsidies to other services.

7 While these were reasonable objectives for the Authority at the time that existing  
8 rates were established, the fact is that the FCC has concluded, in response to its  
9 Congressional mandate, that a different standard should now be applied:

10 [O]ur ultimate goal in this proceeding is to ensure the wide  
11 deployment of payphones through the development of a  
12 competitive, deregulatory payphone industry. To achieve  
13 this goal, we found that it would be necessary to eliminate  
14 certain vestiges of a long-standing approach to payphones.  
15 To this end, the *Report and Order* directs the removal of  
16 subsidies to payphones, provides for nondiscriminatory  
17 access to bottleneck facilities, ensures compensation for all  
18 calls from payphones, and allows all competitors an equal  
19 opportunity to compete for essential aspects of the  
20 payphone business.<sup>17</sup>  
21

22 The FCC has been clear that this new standard must be applied when evaluating  
23 rates for payphone access services. In CC Docket 97-140, the Common Carrier Bureau

1 of the FCC evaluated rates proposed by Bell Atlantic and found that the proposed  
2 overhead loadings had not been adequately justified.<sup>18</sup> In addition to the lack of  
3 necessary justification, the FCC noted that "the Bureau found that Bell Atlantic had set  
4 rates based on considerations not relevant under the new services test, such as the current  
5 prices for these services in their intrastate tariffs." *Payphone Features Order*, at ¶ 6.

6  
7 Q. AT PAGE 13 OF HIS TESTIMONY, MR. SANDERS ARGUES THAT THE  
8 AUTHORITY SHOULD NOT ORDER COST BASED RATES FOR PAYPHONE  
9 ACCESS SERVICES IN THIS PROCEEDING, BECAUSE TO DO SO "WOULD  
10 FAVOR THE PAYPHONE INDUSTRY OVER OTHER BUSINESS CUSTOMERS."  
11 DO YOU AGREE?

12 A. Absolutely not. There are two fundamental differences between payphone providers and  
13 other business customers. First, payphone providers obtain a service from BellSouth in  
14 order to then compete with BellSouth's payphone operations. The impact of inflated  
15 rates – and BellSouth's incentives to inflate those rates – is fundamentally different for

---

<sup>17</sup> Payphone Reconsideration Order, at ¶ 139.

<sup>18</sup> This recent investigation (and rejection) by the FCC of interstate payphone rates proposed by Bell Atlantic puts the BellSouth claim that the FCC merely accepts cost/price ratios as a demonstration of new services test compliance into the proper light.

LOUISIANA PUBLIC SERVICE COMMISSION  
ADMINISTRATIVE HEARINGS DIVISION

DOCKET NO. U-22632

BELLSOUTH TELECOMMUNICATIONS, INC.  
EX PARTE.

In Re: BellSouth Telecommunications, Inc., filing  
of new cost studies for providing Access  
Line Service for customer provided public  
telephones and SmartLine service for public  
telephone access.

---  
DEPOSITION OF DORIS DAONNE CALDWELL  
---

Deposition of DORIS DAONNE CALDWELL, taken  
on behalf of Louisiana Public Payphone Association,  
pursuant to stipulations contained herein, before  
Laura M. Barstow, RPR, CCR No. B-1275, at 675 West  
Peachtree Street, Suite 4300, Atlanta, Georgia, on  
Wednesday, April 12, 2000, commencing at the hour  
of 1:45 p.m.

Shugart & Bishop  
Certified Court Reporters  
Suite 390, 6520 Powers Ferry Road  
Atlanta, Georgia 30339  
(770) 955-5252

2

1 APPEARANCES OF COUNSEL:

2 FOR LOUISIANA PUBLIC PAYPHONE ASSOCIATION:

3 KENNETH E. PICKERING, ESQUIRE  
4 PICKERING & COTOGNO  
5 301 MAGAZINE STREET  
6 NEW ORLEANS, LA 70130

7 FOR BELLSOUTH TELECOMMUNICATIONS, INC.:

8 A. LANGLEY KITCHINGS, ESQUIRE  
9 675 WEST PEACHTREE STREET  
10 SUITE 4300  
11 ATLANTA, GA 30375-0001

12 L. BARBEE PONDER, ESQUIRE  
13 (BY TELEPHONE)

14 ALSO PRESENT:

15 MR. SANDY E. SANDERS

16

17

18

DORIS DAONNE CALDWELL,

19 having been duly sworn, was examined and testified  
20 as follows:

21

EXAMINATION

22 BY MR. PICKERING:

23 Q. Ms. Caldwell, will you state your name for  
24 the record, please?

25 A. Doris Daonne Caldwell.

Q. And you go by "Daonne"?

A. Daonne.

Q. I assume you have given depositions in the  
past on occasions?

SHUGART & BISHOP

1 A. Yes, I have.

2 MR. PICKERING: We will have the  
3 usual stipulations. Is that fine?

4 MR. KITCHINGS: Yes, sir.

5 BY MR. PICKERING:

6 Q. I have received your direct testimony. And  
7 so we won't do any questions as regards your  
8 background and so forth. I think that's been laid  
9 out pretty well. What I would like to do though is  
10 to ask you a few questions relative to your direct  
11 testimony that you have submitted dated April 7th  
12 of '99.

13 And it's my understanding that the  
14 testimony that you gave or that you have submitted  
15 as your direct testimony on April 7th of '99 -- that  
16 the supplement that has been filed really doesn't  
17 add anything substantive to your testimony. Is that  
18 correct?

19 A. I'm sorry. The supplemented -- I'm a  
20 little confused.

21 (Discussion off the record.)

22 (The oath was administered by the reporter.)

23 BY MR. PICKERING:

24 Q. What I'm referring to as a supplement would  
25 have been dated March 17th of 2000. And --

SHUGART & BISHOP

4

1 MR. KITCHINGS: I thought,  
2 Mr. Pickering, that Mr. Sanders was the witness  
3 that submitted supplemental testimony, not  
4 Ms. Caldwell.

5 MR. PICKERING: All right. I think  
6 you're absolutely correct.

7 BY MR. PICKERING:

8 Q. None has been submitted by you then?

9 A. No, I have not.

10 Q. I assume then that you don't have any  
11 intention of submitting any additional direct  
12 testimony?

13 A. No.

14 Q. Thank you, ma'am. Can you tell me, please,  
15 ma'am, a list of other states in which you have  
16 produced or sponsored any cost data in order to  
17 demonstrate compliance with the FCC pay phone  
18 requirements?

19 A. To the best of my recollection, I filed in  
20 South Carolina, Kentucky. In North Carolina we  
21 worked with the Commission staff on some of the  
22 actual information that they were using to do the  
23 actual pay phone analysis on the New Services Test.  
24 I can't remember right off if we ever filed anything  
25 formally with them, but we did discuss that with the

SHUGART & BISHOP

5

1 staff as to what they had done.

2 Those are the ones that I am sure about. I  
3 have done some analysis in Florida in which I talked  
4 with one of the pay phone association groups. I'm  
5 sorry. I cannot remember the exact name. And also  
6 I believe -- the staff was not present. It was just  
7 the pay phone association group where we talked  
8 about some cost study work.

9 Q. Can you describe for me, please, ma'am,  
10 each and every difference in the PTAS costs which  
11 were developed for Louisiana and the differences in  
12 the way the PTAS costs were reported for Louisiana?

13 MR. KITCHINGS: I object to the form  
14 of the question. You may answer it.

15 A. I'm sorry. I don't understand it.

16 Q. Let me ask you, compared to other states,  
17 what differences would you have looked at in  
18 Louisiana as compared to, say, South Carolina or  
19 Kentucky?

20 A. Okay. First of all, we looked at the  
21 actual Louisiana specific data. We used as a  
22 foundation of the study -- we had recently completed  
23 a generic cost docket. And with that the Commission  
24 had ruled on certain items like cost of money,  
25 depreciation, and also some inputs to the loop model

SHUGART & BISHOP

6

1 as to, I believe, utilizations, things of that  
2 type.

3 So we felt, since the Commission had just  
4 ruled on those broad issues affecting cost, that we  
5 would include those. So those were very specific to  
6 Louisiana, and we included those in the Louisiana  
7 study. Then for the actual underlying loop sample  
8 that we used, we used the Louisiana specific data  
9 that would be the loop sample for the State of  
10 Louisiana from the other studies.

11 And we performed the TSLRIC cost study  
12 associated, which is the total service long run  
13 incremental cost, for the pay phones in Louisiana.

14 Q. What specifically would you have developed  
15 to demonstrate that the rates are cost based?

16 A. I would say the study itself because what  
17 we have done is to develop the cost study. And we  
18 have determined what the cost of providing pay phone  
19 service is. The PTAS is the one that you  
20 mentioned. We also did the SmartLine. So that is  
21 what the cost of the actual service is to BellSouth  
22 for providing that.

23 Now, once it comes to the rates and whether  
24 or not -- you know, the rates and how they are  
25 actually set, Mr. Sanders will address those rates

SHUGART & BISHOP

7

1 and how he set those rates. But the cost study  
2 itself does give the foundation.

3 Q. Does the cost study that you have submitted  
4 show the actual cost to BellSouth?

5 A. Yes. It shows the long run incremental  
6 cost for providing the pay phone service that we  
7 could incur in providing that service, yes.

8 Q. Can you define for me "cost based"?

9 A. And I guess I probably should have verified  
10 that when we started this in question. In terms of  
11 cost based, I answer truly from a cost standpoint.  
12 In other words, when I looked at a service, what it  
13 would cost BellSouth on an incremental basis to  
14 provision that service.

15 So that's how I'm using the term "cost  
16 based." I'm not saying that rates are equal to that  
17 or rates are greater than that or any relationship  
18 to rates. All I'm saying is that's what the cost  
19 is.

20 Q. Is the cost base the same for PTAS as it is  
21 for UNES?

22 A. No. The way the actual studies are done,  
23 you have some different assumptions. And I think  
24 the biggest difference is that PTAS -- I looked at  
25 it as a service. So when I study PTAS, I look at

SHUGART & BISHOP

8

1 what the cost of providing pay phone service is. I  
2 included some costs for, I believe, some product  
3 management, some retail costs that we incur  
4 associated with that service.

5 When you look at UNEs, you have some of the  
6 same foundation in the network. But you do not --  
7 you are actually restricted in your study of UNEs by  
8 the FCC and their pricing methodology, which is  
9 TELRIC.

10 So when I studied UNEs, say, in Louisiana,  
11 I would have used the TELRIC methodology prescribed  
12 by the FCC. I guess the better word is "proposed."

13 Q. Did you study the PTAS as a service in  
14 South Carolina and Kentucky also?

15 A. In Kentucky we did it as a service. When I  
16 looked at it in South Carolina, we used the  
17 assumptions associated with the UNE studies that had  
18 just been conducted there. However, we did  
19 demonstrate what would be the direct cost  
20 component.

21 And then we indicated in that South  
22 Carolina study the shared and common as a separate  
23 item. So both were indicated. It did not include  
24 any retail.

25 Q. What specific test or using what specific

SHUGART & BISHOP

9

1 cost information do you recommend that the  
2 Commission use to determine cost based rates?

3 A. I can't answer that just in total general  
4 terms.

5 Q. All right.

6 A. Can you narrow the question or maybe  
7 rephrase it a little bit?

8 Q. What do you need to know and how do you  
9 arrive at the cost based rates?

10 A. I think I have a problem when we keep  
11 talking about cost based rates. I can tell you how  
12 I do my cost, and from that standpoint I can answer  
13 the question.

14 Q. Okay.

15 A. When I'm looking at something, for  
16 instance, in a UNE study where you have definite  
17 rules for -- it goes so far as to discuss pricing,  
18 the FCC August 8th Order, associated with UNEs where  
19 actually the FCC proposes a methodology for studying  
20 your individual components of the network.

21 So the FCC has defined a cost methodology  
22 for me to use. So from that standpoint, that's how  
23 I do my cost. And in that particular case you  
24 actually do say that the beginning -- those are the  
25 costs that are used to look at to determine your

SHUGART & BISHOP

10

1 rates.

2 When I'm looking at a service, what I  
3 really am trying to do is to determine, first of  
4 all, the price floor for my service, in other words,  
5 the value for which BellSouth should not price  
6 below. In other words, it costs us so much per loop  
7 or so much per line to provide PTAS service, so  
8 therefore we should price at least to cover that.

9 And then we should have a contribution over  
10 and above that to cover your joint and common cost.  
11 And that's how the costs are the foundation in those  
12 analyses.

13 Q. Can you tell me maybe a list, for instance,  
14 of the changes that reflect the values ordered by  
15 the Commission in the UNE case as regards the  
16 figures you have in this cost based study? What is  
17 the difference between what you did for UNE and what  
18 you now have presented?

19 A. I'm having to stop to think. The  
20 foundation of the PTAS study is the loop study.  
21 That's the predominant component. The one  
22 difference between the TELRIC study, which was done  
23 for the UNES, and the PTAS study is it deals with  
24 the res-bus mix.

25 When we looked at -- mainly we used the

SHUGART & BISHOP

11

1 res-bus mix to get a loop length that would be  
2 representative of the service that I'm offering.  
3 When I was studying the UNE, we looked at the  
4 res-bus mix that was in the network at that point in  
5 time because any particular loop could become a  
6 UNE.

7 So we looked at a res-bus mix that gave me  
8 a meld that provided a loop length very close to the  
9 coin data that we had available. And I'm using  
10 "coin" as general here for any PTAS or SmartLine  
11 that we have. Then the next step we looked at is in  
12 dealing with -- we made all the adjustments that the  
13 Commission had ordered associated with the loop,  
14 which would be things like your utilization factors,  
15 your cost of money, your depreciation, etcetera. So  
16 they match there.

17 I think that pretty well talks about the  
18 loop. In terms of the usage component, we looked at  
19 coin specific data, in other words, the number of  
20 calls that would be received in a month and the  
21 average minutes of a coin or pay phone call. And  
22 that was used to develop the usage.

23 Based upon that, I think that's pretty  
24 close to the differences in the network components.  
25 Then I included in the pay phone study cost for

SHUGART &amp; BISHOP

REDACTED

12

1 retail such as product management, some advertising  
2 things associated with that. Advertising is really  
3 kind of a misnomer. It was some plans we had from  
4 for promotions, that type stuff.

5 Q. Where is that in the study? Do you recall?

6 A. It's in the section under product  
7 management. I believe it's [REDACTED]  
8 one of the items very near the front. It's actually  
9 present -- the cost is taken over an annual time and  
10 a present worth.

11 Q. I show you -- these pages are not  
12 numbered. But it is part of the beginning of  
13 Exhibit DDC-1, where we have an executive summary  
14 and then a summary of results. And then there are  
15 three pages, I believe, following that. That's the  
16 three pages that you're referring to that have some  
17 breakdown on what you're referring to?

18 A. I believe so, yes.

19 Q. I'm looking at a page that has a heading on  
20 it: Pay Phone Product Line Cost. Is that what  
21 you're referring to?

22 A. Yes. And it actually -- where I said maybe  
23 I had used "advertising" as an incorrect term, I was  
24 thinking of the reference here to publications,  
25 which is line 16 on that study. That's it.

SHUGART &amp; BISHOP

REDACTED

13

1 Q. Line 16, if I can read from this, says  
2 conferences and publications. And then it has a  
3 figure of [REDACTED] over to the right. That's in  
4 year one. And year two -- what does year two say?

5 A. [REDACTED]

6 Q. And year three?

7 A. [REDACTED]

8 MR. KITCHINGS: Mr. Pickering, one  
9 point of order here.

10 MR. PICKERING: Sure.

11 MR. KITCHINGS: Just as a reminder,  
12 everything in BellSouth's cost study is  
13 considered proprietary. So to the extent we've  
14 got numbers and we're going to get into  
15 discussing those, we're going to need to treat  
16 those a proprietary in the deposition  
17 transcript and however we treat it in terms of  
18 the hearing and any publications.

19 Just to make sure we're all on board  
20 with that.

21 MR. PICKERING: I have no problem  
22 with that. And any of the experts employed by  
23 us will be bound by the same proprietary --

24 MR. KITCHINGS: As I recall,  
25 Mr. Woods signed the protective agreement. So

SHUGART &amp; BISHOP

14

1 I think we're okay there.

2 MR. PICKERING: That is correct.

3 BY MR. PICKERING:

4 Q. This is listed -- on line 15 it says other  
5 costs. Then right below that, BellSouth sponsored  
6 pay phone conferences and publications is what we  
7 were referring to and those dollar figures following  
8 years one, two, and three.

9 A. Yes.

10 Q. This is on a go-forward basis, I assume?

11 A. Yes.

12 Q. Had money been spent in the past for  
13 BellSouth sponsored pay phone conferences and  
14 publications?

15 A. Yes.

16 Q. Are any of that type of expense included in  
17 your arriving at these projected cost figures?

18 A. None of the past the expenses are  
19 included. That would be the forward-looking  
20 expenses for the forward-looking three years where  
21 we're studying.

22 Q. My question though is: Did you use the  
23 expenses that had been in the past to project the  
24 cost of what it might be in years one, two, and  
25 three on a go-forward basis?

SHUGART & BISHOP

15

1 A. Those numbers were actually provided by our  
2 subject matter experts that handle the publications  
3 and conferences. They provided that to the cost  
4 organization. Now, whether or not they, you know,  
5 looked at a budget or they used some type of  
6 existing data, I cannot answer that.

7 Q. So you don't really know where those  
8 numbers come from?

9 A. I know where it came from. I just do not  
10 know the source of data that they used to provide  
11 it.

12 Q. Help me with the next line, line 17, net  
13 present value of cost. Help me with that. What  
14 does it mean?

15 A. Okay. It represents -- if you look at the  
16 three years above that on line 16, it represents the  
17 net present values of those dollars. Let me just  
18 check one thing here, please. Okay. It represents  
19 those three dollar amounts in the current year's  
20 dollars expressed at line 39, which is your cost of  
21 money, which was ordered by the Commission.

22 Q. We'll come back to this document a little  
23 bit later.

24 A. Okay.

25 Q. When we talked about the changes from the

SHUGART & BISHOP

16

1 current cost study that you've done for these  
2 proceedings and what was done for the UNE case, were  
3 those required changes by the Commission in  
4 Louisiana?

5 A. I think the answer to that is yes and no.  
6 From the UNE docket they ordered such things as cost  
7 of money and depreciation, so I included those items  
8 in my pay phone study. So we considered that,  
9 whether or not we were specifically ordered. But  
10 based on the recent Order, we felt that was the  
11 appropriate thing to do.

12 The other issue where I talked about using  
13 data so that it represented the coin loop length,  
14 that would have been to make it service specific.

15 Q. On your pre-file testimony on line 25 on  
16 page 2, if you have a copy of it, at the right-hand  
17 side of that line where it starts the sentence "as a  
18 result of UNE hearings, this Commission recommended  
19 values and inputs that are standard in cost studies,  
20 i.e., the cost of money, depreciation" --

21 A. Uh-huh.

22 Q. That's what I was asking. Were those  
23 required of the Commission to make those  
24 differences?

25 A. No. The Commission did not tell me that in

SHUGART &amp; BISHOP

17

1 every cost study that I did going forward I had to  
2 include, for instance, the ordered cost of money and  
3 the depreciation rates. But the word "standard"  
4 that I'm using it here implies that in cost studies  
5 there are certain inputs that appear like in every  
6 cost study.

7 And the cost of money is one. Depreciation  
8 rates is one. So when I had a standard cost input,  
9 since the Commission had just recently ruled on  
10 those issues, I adopted those in my pay phone study.

11 Q. Why?

12 A. Because we felt the Commission had already  
13 made their understanding of what they felt that the  
14 cost of money should be at that point in time and  
15 what the depreciation rate should be that they felt  
16 were appropriate. So we used those.

17 Q. And what did they decide was the cost of  
18 money?

19 A. I believe it's 10.15 percent. If you'll  
20 give me just one moment.

21 Q. Surely.

22 A. Yes. It's in my testimony on page 10 at  
23 line 19. 10.15 percent.

24 Q. And while we're there, the depreciation  
25 rates?

SHUGART &amp; BISHOP

18

1           A.       I don't have them listed by account, but  
2 they were the FCC authorized depreciation rates  
3 that's on line 20 of that same page.

4           Q.       As regard to the changes that we have just  
5 been talking about, as a cost analyst is it your  
6 position that these changes were appropriate?

7           A.       I made the changes because I thought that,  
8 in filing the study before the Commission, this was  
9 the right thing to do because the Commission had  
10 just issued a ruling on cost of money. And filing  
11 an 11.25, which is normally what we would include at  
12 that point in time, we would have raised that issue  
13 in this docket and argued the same points that we  
14 had just argued previously.

15                   And we just didn't feel that at this point  
16 in time it was worth that, you know, that the  
17 Commission had made very clear at that point in  
18 time -- which we're talking now several years ago.  
19 But at that point in time, they had just issued a  
20 ruling on these inputs.

21                   So we did not feel, since we were filing  
22 this study with the Commission, that it was the  
23 right time or to anyone's benefit to argue those  
24 same issues again. So that's why I included them.

25           Q.       On page 5 on lines 11 through 13, describe

SHUGART &amp; BISHOP

19

1 for me in detail this daily pay phone flat rate -  
2 monthly cost and how that was developed.

3 A. It is actually calculated in those pages we  
4 were just recently looking at that we were  
5 referencing. But in general what you do is -- when  
6 you look at a flat rate, we want to calculate the  
7 usage that would be on a typical pay phone line --  
8 in this case we're talking about PTAS -- on a PTAS  
9 line.

10 So we look at the average number of calls  
11 that that line would have in a month and then the  
12 average duration of those calls. And then you look  
13 at information such as how many of the calls were  
14 intraoffice, meaning it stayed within the same  
15 switch, it did not go to inner office.

16 Then we would look at the cost of  
17 interoffice, what percentage of the calls actually  
18 went from Office A to Office B and then, of those  
19 calls, what percentage of them were to pass through  
20 a local tandem.

21 So what you basically do is you calculate  
22 your end office cost. You calculate on a per minute  
23 basis. You calculate your interoffice cost on a per  
24 minute and a per mile. You calculate your tandem  
25 cost on a per minute basis. And then using the

SHUGART &amp; BISHOP

20

1 duration of the call and the number of calls in a  
2 month, you calculate the flat rate against those  
3 components.

4 Q. I guess what I'd lying to ask you is why do  
5 you consider it appropriate to use the pay phone  
6 specific data to arrive at those figures?

7 A. Because I'm looking at a pay phone  
8 service. I'm trying to calculate the cost that the  
9 pay phone service is placing on the interoffice and  
10 switching network.

11 Q. Going to the next page in the middle of the  
12 page, page 6 on lines 14 through 17, were your cost  
13 studies performed solely for use in developing a  
14 cost-price ratio?

15 A. Yes. When these studies were conducted,  
16 they were to be used with providing to the  
17 Commission to see that we studied the New Services  
18 Test.

19 Q. How would your studies have been performed  
20 differently if they were to show the rates are cost  
21 based?

22 A. I know of no reason I'd have to do a  
23 services test -- excuse me. I know of no reason I  
24 would have to do a cost study of a service -- could  
25 you rephrase it?

SHUGART &amp; BISHOP

21

1 Q. Yes. You told me that the cost studies  
2 were performed solely for use in developing a  
3 cost-price ratio. My question is: Would you have  
4 done something differently to show a cost base as  
5 opposed to a cost-price ratio?

6 A. I think it gets back to the basic  
7 foundation of, you know, what we mean by cost  
8 based. If I am studying a service, then I would do  
9 a TSLRIC study, assuming that that study would be  
10 used for a price floor or, in this case, used to  
11 support the New Services Test.

12 So in looking at the services, I would use  
13 the same TSLRIC type approach for the studies that I  
14 would be doing.

15 Q. Okay. Assume for the moment that the  
16 requirements are that the PTAS rates be cost based.  
17 Is your study sufficient to demonstrate that?

18 A. From my understanding of cost based, I  
19 would say it would be. My understanding of cost  
20 based is that you have a cost of some type, whether  
21 it be for a price floor or it be actually in the  
22 TELRIC world where your cost actually becomes the  
23 rate.

24 In both cases you have the cost study that  
25 is the foundation, and it provides the beginning to

SHUGART &amp; BISHOP

22

1 show that your rate is above your price floor.

2 Q. The cost study that you've done here shows  
3 your actual cost, or the floor, does it not?

4 A. It shows -- just to get our terms very  
5 clear -- because I have used TSLRIC as a price  
6 floor, and I know pure economists will always say  
7 LRIC, which is just long run incremental cost, as a  
8 price floor. All I have done is I have included  
9 both volume sensitive and volume insensitive cost.

10 And so keeping that as our definition, I  
11 have very broadly interpreted TSLRIC to be price  
12 floor. But we need to keep that very straight. So  
13 when I'm studying a service and I'm looking at the  
14 incremental cost, then I am looking at the cost  
15 BellSouth must cover to provide that service.

16 I'm not looking at the rate. I'm looking  
17 at just the cost that BellSouth must recover.

18 Q. Correct. You're not looking at what they  
19 charge, you're looking at what it costs them to  
20 provide the service. Is that correct?

21 A. Right.

22 Q. And that's what this study indicates --

23 A. Yes.

24 Q. -- that you've done?

25 A. Yes. This study indicates --

SHUGART & BISHOP

23

1 Q. Cost?

2 A. Cost.

3 Q. It doesn't talk about cost price?

4 A. No, it does not.

5 Q. Assuming that the Commission requires a  
6 cost based study, is that all that is required in  
7 what you have provided or is that a beginning of  
8 trying to arrive at cost base?

9 A. The Commission would have to tell me what  
10 they mean by cost base. I feel that the study I  
11 have provided is the foundation for us to consider  
12 whether or not we pass the New Services Test.

13 Q. Is it your understanding that the FCC's  
14 requirements -- let me rephrase the question. What  
15 is your understanding of the FCC's requirements,  
16 especially whether or not it's limited to the New  
17 Services Test?

18 A. With relationship to pay phone?

19 Q. Yes, ma'am.

20 A. Mr. Sanders will have to answer in detail  
21 exactly what it is. I can answer what my  
22 understanding is. And my understanding is that we  
23 need to show that pay phone service passes the New  
24 Services Test. That's all we need to show.

25 Q. What specifically have you developed then

SHUGART & BISHOP

24

1 to demonstrate compliance with the New Services  
2 Test?

3 A. What I have done is I have developed the  
4 TSLRIC, which is the foundation of the cost, that  
5 is, the cost to provide the service. Then the next  
6 step would be in determining the contribution that  
7 that service would be expected to make towards the  
8 joint and common cost of the firm as well as any  
9 subsidies or whatever for universal service.

10 And that portion is handled by  
11 Mr. Sanders. I just do the cost foundation.

12 Q. Are the nonrecurring costs that you  
13 developed specific to pay phone service or are they  
14 developed using pay phone specific data?

15 A. Many of the functions are very similar  
16 between the services. But if there was something  
17 that was specific to pay phone such as maybe the  
18 time to deal with the order or the customer, that  
19 was unique to pay phone. So, yes, we feel the  
20 nonrecurring would be a cost to PTAS type  
21 environment.

22 Q. Why do you consider it appropriate to use  
23 the pay phone specific data?

24 A. Again, because I'm studying the pay phone  
25 service.

SHUGART &amp; BISHOP

25

1 Q. Define TSLRIC for me.

2 A. Stands for total service long run  
3 incremental cost. It is both the volume sensitive  
4 and the volume insensitive costs that are required  
5 when a service is going to be provided, in other  
6 words, a direct cost of providing that service. Or  
7 sometimes you can look at it as the volume sensitive  
8 and the volume insensitive cost of discontinuing a  
9 service.

10 Q. Tell me the differences, please, ma'am,  
11 between TSLRIC and TELRIC, however you say it.

12 A. I say TS LRIC.

13 Q. Thank you. TSLRIC.

14 A. The real difference is in what you are  
15 studying. If you're looking at TSLRIC, you're  
16 looking at a service that you're going to be  
17 providing. And in that particular environment, you  
18 have costs that may be shared or common that would  
19 not be a direct cost of providing a service. But  
20 when you move to the TELRIC environment, those  
21 shared costs become direct.

22 So the real difference between the two is  
23 what you're studying. TSLRIC is a service that  
24 you're providing. TELRIC is the cost of a network  
25 component.

SHUGART & BISHOP

26

1 Q. What are the differences in the inputs that  
2 you would use for TSLRIC and TELRIC?

3 A. I think the real difference would be in  
4 your service. You would look at inputs that are  
5 specific to that service, such as -- remember I said  
6 the residence-business mix that gave me a loop  
7 length that was very similar to the pay phone loop  
8 length in Louisiana. That would be an example that  
9 in the TSLRIC the inputs would be specific to that  
10 particular service.

11 Also -- and I didn't go into this when we  
12 talked about the difference in the definitions. But  
13 TELRIC by definition is proposed by the FCC. And  
14 it's built on the concept that you are a wholesale  
15 company, so you have no retail cost.

16 That's the concept of TELRIC whereas if I  
17 am dealing with a TSLRIC or a service, I would have  
18 the retail cost of providing that service.

19 Q. Is it BellSouth's position that it is  
20 required to use the same cost model used to develop  
21 UNE costs when calculating pay phone costs?

22 A. No.

23 Q. Why not?

24 A. There is no requirement, when I'm looking  
25 at a service, to meet all the TELRIC standards.

SHUGART & BISHOP

27

1 Q. As a cost analyst why did you decide that  
2 the UNE TELRIC model could and should be used to  
3 develop the cost for use in these proceedings?

4 A. The underlying model itself can be adjusted  
5 with the appropriate input so that it can calculate  
6 a TSLRIC study.

7 Q. What are the adjustments that are  
8 necessary?

9 A. I mentioned the adjustments made on the  
10 loop sample. We also have to calculate some of the  
11 information outside the model and introduce new  
12 items. I think like number screening, some of the  
13 features in the switch, we looked at those  
14 separately and calculated those.

15 Also we did not include, when we made the  
16 TELRIC -- excuse me. When we processed the study  
17 through the TELRIC Calculator, we did not include  
18 the shared and common, which would be appropriate in  
19 the UNE world.

20 Q. Setting aside whether you think it ought to  
21 be done, would it be possible to include shared and  
22 common costs through the use of a TELRIC Calculator?

23 A. Yes.

24 Q. Describe the changes made to TELRIC  
25 Calculator in order to produce only direct cost.

SHUGART &amp; BISHOP

28

1           A.       I believe in the version of the Calculator  
2 that was used in this study, which would have been  
3 in the, I guess, early 1999 time frame, we would  
4 have gone in and for the shared factor and the  
5 common factor, you just really ignore those  
6 outputs.

7                    You can either go in and, since they're  
8 multiplications, you could set them to 1. Or the  
9 Calculator -- when you get your output from the  
10 Calculator, it gives you your direct cost. Then it  
11 gives you your shared cost and the common costs. So  
12 you should be able to just pull the direct cost  
13 column rather than actually doing another run, I  
14 believe.

15           Q.       I'm looking at a recurring cost summary.  
16 This is on what's Bates paged number 14. Is this an  
17 example of what you're just referring to?

18           A.       Yes. In fact what they have done is the  
19 shared cost. And I apologize. I said it would  
20 probably be set to 1. It looks like they set them  
21 all to zero. So the shared cost becomes zero. And  
22 then you'll notice the common cost factor was set to  
23 1, and it's multiplied on this page.

24                    So what you basically have out of the  
25 TELRIC Calculator is the direct cost by doing that.

SHUGART &amp; BISHOP

REDACTED

29

1 Q. Yes. And so there is no multiplier of  
2 that?

3 A. Right.

4 Q. Anything else need to be done to get the  
5 direct cost, for instance, on this example?

6 A. This should be the final number.

7 Q. So on page 14 where it says total monthly  
8 economic cost, [REDACTED] would be the total cost?

9 A. Yes. For that component, which happens to  
10 be the loop.

11 Q. Right. For this component, which is the  
12 analogue voice grade loop for PTAS?

13 A. Right.

14 Q. On this work paper or in other work papers,  
15 if it's not on this one, where would you have shown  
16 the shared costs between residential and business?  
17 I'm sorry. The mix that would be used. Not the  
18 shared cost but the mix that would be used between  
19 residential and business.

20 A. In the TELRIC Calculator itself, it  
21 actually connects to the loop model. And in the  
22 loop model there is a spreadsheet that has the  
23 residence-business mix as inputs that you can  
24 adjust.

25 Q. What was used in your calculations for this

SHUGART &amp; BISHOP

30

1 cost test?

2 A. I don't remember.

3 Q. Is there a work paper within the cost study  
4 that would tell us that? You can look at it if  
5 you --

6 A. I can't remember. I would have to look.

7 MR. PICKERING: While looking for  
8 that, may we take a little break?

9 MR. KITCHINGS: Certainly.

10 (A recess was taken.)

11 BY MR. PICKERING:

12 Q. Were you able to find those sheets?

13 A. Those sheets are not in this document.  
14 They were internal to the loop model associated with  
15 TELRIC Calculator.

16 Q. And I think you said that you couldn't  
17 remember what percent of business and what percent  
18 of business was used in the model that you used to  
19 development this cost. Is that something that you  
20 could produce for me?

21 A. Yes, I could.

22 MR. PICKERING: Then I would ask,  
23 Counsel, that that be produced, the actual  
24 sheets that would show us not only the  
25 percentage that was used on each but then what

SHUGART & BISHOP

31

1 factors were used to develop the cost.

2 In other words, if it was business,  
3 anything related that had to do with business  
4 cost. And if it was residential, whatever  
5 factors were used.

6 BY MR. PICKERING:

7 Q. Am I making myself understood? For  
8 example, if you used X percentage of business, then  
9 was it related -- how did you use that? Was it as  
10 to a specific cost factor for business?

11 A. The way the model does is it develops a  
12 business loop and it develops a residence loop. And  
13 by that I mean it gives you, by field reporting  
14 code, the amount of material price associated with  
15 each one of the field reporting codes in the  
16 business loop and the residence loop.

17 And then what the rating does is it  
18 multiplies -- it applies the percentage to the  
19 business loop and the residence loop to meld them  
20 together.

21 Q. Okay. But what I'm interested in you  
22 providing for me is what it was in the business loop  
23 and what it was in the residential before you would  
24 have melded them together and then the percentage of  
25 each, whether was 20 percent or 40 or whatever it

SHUGART & BISHOP

32

1 was.

2 A. Okay.

3 MR. PICKERING: Can we do that?

4 MR. KITCHINGS: Is such readily  
5 available or is that something we'd have to  
6 create?

7 THE WITNESS: The percentages are  
8 readily available. We would have to go into  
9 the Calculator to find those pages. I mean I  
10 would have to find those out. They're not  
11 readily at my hands.

12 MR. KITCHINGS: Well, we'll give you  
13 what we can find. We're not going to create  
14 anything.

15 MR. PICKERING: No. And I'm not  
16 asking you to create it. But assuming it's in  
17 the calculations somewhere, then we'd ask you  
18 to provide that.

19 MR. KITCHINGS: Sure.

20 BY MR. PICKERING:

21 Q. And it's in there somewhere? You don't  
22 have create it, you have to find it. Is that  
23 correct?

24 A. I think I actually have to run the loop  
25 model to get that number.

SHUGART & BISHOP

33

1 Q. Yes. But it's in the loop model is my  
2 point.

3 A. It's in the loop model, yes.

4 Q. Okay. If you will furnish us that, please,  
5 ma'am. Thank you.

6 Define for me, please, ma'am, "overhead  
7 cost" as you used it relative to -- I think it's on  
8 page 9, line 12. In italics you have overhead cost,  
9 the level of overhead cost. Define that for me,  
10 please, ma'am.

11 A. In that particular reference, I'm using  
12 that as shared and common cost, both shared and  
13 common.

14 Q. The question is, on line 6: Should the  
15 Commission, in determining whether the pay phone  
16 service rates meet the New Services Test, consider  
17 shared and common? And you said: Yes. But only  
18 indirectly.

19 Please help me with what "indirectly"  
20 means.

21 A. Basically the way I'm using the term in  
22 terms of "indirectly" is you should not take some  
23 allocation of shared cost and common cost and  
24 allocate it to pay phone. What you should do is  
25 look at the rate that would be appropriate. And

SHUGART &amp; BISHOP

34

1 - Mr. Sanders addresses what that should be.

2 And then just be sure that that rate is  
3 above the TSLRIC cost I have calculated so that the  
4 product does make a contribution to the -- I use the  
5 term "overhead" but is shared and common cost to the  
6 firm.

7 Q. In your opinion is the amount of the  
8 overhead cost currently included in the PTAS rates a  
9 reasonable amount to be included in a cost based  
10 rate?

11 A. I do not know what the rate is. I can't  
12 remember what the rate is. Mr. Sanders could answer  
13 that.

14 Q. Is it your opinion that the PTAS rates  
15 currently include a reasonable amount of overhead  
16 cost?

17 A. I do not know what the rate is. I mean  
18 they do include some level of contribution of shared  
19 and common, but Mr. Sanders would have to tell you  
20 what that is.

21 Q. You don't know what that overhead cost is?

22 A. I do not know what the rate is right now.

23 Q. Or what portion of that rate constitutes  
24 overhead cost?

25 A. No.

SHUGART &amp; BISHOP

35

1 Q. Assume for just illustration purposes that  
2 the rate was \$50. Would that be, based on the cost  
3 and the overhead, a reasonable rate of overhead?

4 A. I think there are several factors that you  
5 would have to look at, of which I do not have the  
6 data to consider those. You have to look at other  
7 maybe similar products in the market and what prices  
8 or -- excuse me -- what charges are actually for  
9 those similar type products and other services, what  
10 are the contribution levels for those similar type  
11 offerings.

12 Q. Are there similar type offerings to pay  
13 phones?

14 A. I think there are some services that we  
15 filed with the FCC we might could look at, but  
16 beyond that I need to defer that to Mr. Sanders.

17 Q. On page 9 -- lines 13 and 14, I'm making  
18 reference to -- define for me, please, ma'am,  
19 implicit subsidy that a service contributes to its  
20 universal service.

21 A. My understanding of an implicit subsidy is  
22 that we have services that have a contribution level  
23 that's positive. It is over and above the total  
24 service long run incremental cost. So there is a  
25 positive contribution to the shared and common cost

SHUGART &amp; BISHOP

36

1 of the firm.

2 And also in some of our services there is  
3 an additional contribution level that was considered  
4 when the rates were set as some contribution towards  
5 the universal service fund or the universal  
6 service -- the best way to say that is the provision  
7 of universal service.

8 And it's implicit because it's never said  
9 that like \$2 of this particular rate is for  
10 universal service. It's just that a group of  
11 services as a whole are going to contribute to  
12 universal service.

13 Q. Do you know what portion of the current  
14 rates are relative to implicit subsidy towards  
15 universal service?

16 A. I do not.

17 Q. On a cost based rate, what percent would  
18 you think would be appropriate for an implicit  
19 subsidy?

20 A. I think, again, we're back to the term  
21 "cost based" that keeps giving me a problem. So I  
22 can't answer that question.

23 Q. Well, cost based, I think you have said, is  
24 the actual cost that it costs BellSouth to perform  
25 the service, is it not?

SHUGART & BISHOP

37

1 A. That was how I defined the underlying cost.

2 Q. Right.

3 A. But we seem to keep moving that towards the  
4 rate. And that's the one step I can't make.

5 Q. All right. Well, let me ask you this. In  
6 the cost study that you've done, is there any  
7 implicit subsidy in those figures?

8 A. No, there is not.

9 Q. Do you know of any time that the Louisiana  
10 Commission has rejected BellSouth's efforts to  
11 include an implicit subsidy in a cost rated base --  
12 or cost based rate? Excuse me.

13 A. Could you repeat that? I'm sorry.

14 Q. Yes. Do you know of any time recently or  
15 in recent history when the Louisiana Commission has  
16 rejected BellSouth's efforts to include an implicit  
17 subsidy in the cost based rate?

18 MR. KITCHINGS: I object to the form  
19 of the question. The witness just answered  
20 that there aren't any implicit subsidies in  
21 this rate. But she can answer.

22 BY MR. PICKERING:

23 Q. Go ahead if you can answer.

24 A. No, I really can't. I can't -- I'm really  
25 rather confused.

SHUGART & BISHOP

38

1 Q. Okay. You don't understand the question.  
2 Let me try again. Has the Louisiana Commission, in  
3 any ratings that you have been involved in, rejected  
4 an implicit subsidy as part of that rate?

5 A. In any hearing or --

6 Q. Docket.

7 A. -- docket before the Commission, I would  
8 not have been involved other than just from a cost  
9 aspect. And I cannot remember anything dealing with  
10 an implicit rejection.

11 Q. Okay. Define for me, please, ma'am,  
12 "market based influences."

13 A. Is that taken from my testimony?

14 Q. I think so.

15 A. Is there a reference?

16 Q. Yes, ma'am. On page 9, line 22.

17 A. Market based influences, as I was thinking  
18 about it in terms of this particular sentence, would  
19 be -- when you're looking at the actual rate, you  
20 could have other influences from the market such as  
21 competition or similar products or anything of that  
22 type that would have an influence on the market  
23 itself. Customer's willingness to pay, those type  
24 things that would be considered when you're looking  
25 at the rate aspect.

SHUGART & BISHOP

39

1 Q. How much of the current rate is based on  
2 market based influences?

3 A. I do not know how much of that --

4 MR. KITCHINGS: Off the record for  
5 one second.

6 (Discussion off the record.)

7 BY MR. PICKERING:

8 Q. Let me ask it another way then. What in  
9 your opinion would be a reasonable amount in a rate  
10 that would represent market based influences?

11 A. I don't think you can just give it a dollar  
12 amount. I mean you have to look at what the service  
13 is, what those market influences are, a lot of  
14 different types of information before you could ever  
15 consider that type of -- and I'm not sure you would  
16 ever come up with just a dollar amount so much as  
17 what the appropriate rate should be in the end.

18 Q. How about a percentage?

19 A. I can't answer that.

20 Q. In your opinion would it be appropriate to  
21 include market based influences in a cost based  
22 rate?

23 A. I believe you could because basically,  
24 again, the cost -- using cost based as you have  
25 developed the cost that the company would incur. So

SHUGART & BISHOP

40

1 you know you're covering your cost, and then that  
2 becomes the foundation of it being a cost based  
3 rate.

4 Q. In your cost that you have produced in the  
5 docket on Exhibit DDC-1, did you use market based  
6 influence as a factor?

7 A. Not in the cost study. That would have  
8 been used in determining the contribution level.

9 Q. How far from the actual cost, in your  
10 opinion, could you differ or increase and still be a  
11 cost based rate?

12 A. I don't think there is any measure for  
13 that. As long as the customer is willing to pay and  
14 that's what the market will bear and you're covering  
15 your direct costs, then you're fine.

16 Q. So buyer beware?

17 A. Not necessarily. But as long as the  
18 customer is willing to pay, and that's with  
19 competitive influences.

20 Q. Would 100 percent over cost as a rate be a  
21 reasonable cost based rate?

22 A. Based on my previous statement, there is no  
23 measure. There is no percentage.

24 Q. Same answer for 1000 percent?

25 A. Same answer.

SHUGART & BISHOP

41

1 Q. Thank you, ma'am. On page 10, please,  
2 ma'am, starting with line 19, you say that BellSouth  
3 does not necessarily agree with the adjustments the  
4 specific modifications made include. And the first  
5 one on line 19 would be the cost of money at  
6 10.15 percent, which you talked about earlier.  
7 Where does that number come from?

8 A. That number was ordered in the generic cost  
9 docket by the Commission.

10 Q. Was that figure used in your cost analysis?

11 A. Yes, it was.

12 Q. On line 20, item 2, depreciation basically  
13 set -- you talked about it earlier, that you used  
14 the depreciation that was set by the FCC?

15 A. Yes. Which is also the same numbers that  
16 was ordered by the Louisiana Commission.

17 Q. And what is that number?

18 A. They are different by each individual plan  
19 account, and I do not know those.

20 Q. Would that be included in the DDC-1?

21 A. They were in the Capital Cost Calculator  
22 run, and they are not -- can I have just one  
23 minute?

24 Q. Sure. Of course.

25 A. Yes. You can find them in this

SHUGART &amp; BISHOP

REDACTED

42

1 documentation. You do not have the actual lives,  
2 but you do have the depreciation rate which is  
3 calculated off those lives.

4 Q. And what is that, please, ma'am?

5 A. Well, they're different for each account.  
6 So you would need to look at each individual account  
7 that you're dealing with. But, for instance, if  
8 you're looking at 10-C, which is your building  
9 account, your depreciation factor is [REDACTED]

10 Q. And what page might that be?

11 A. This is on page 29.

12 Q. That's the Bates stamp on the bottom?

13 A. That's the Bates stamp on the bottom. So  
14 each one of your depreciation rates are listed here.

15 Q. While you're there looking at the document,  
16 where would I find the cost of money set out in your  
17 work papers?

18 A. The cost of money is actually two columns  
19 over. Column D -- as in "David" -- is the cost of  
20 money factor. This is after -- it's looked at over  
21 the life of the account. You can always tell what  
22 your cost of money factor is by looking at land.

23 And you can see that the cost of money  
24 factor is [REDACTED] which corresponds to the 10.15  
25 percent that I have listed on page 10. And then the

SHUGART & BISHOP

*REDACTED*

43

1 other cost of monies are calculated by each  
2 individual account. And so for each account you  
3 would find under Column D those factors.

4 Q. And item 3, the plant specific factor, it  
5 says reduce level of expenses by 10 percent. Where  
6 might I find that?

7 A. The actual plant specific factors are on  
8 that same page, Column H as in "Howard."

9 Q. Item 4 the structure sharing, where would  
10 we find that?

11 A. Those particular calculations are internal  
12 to the model. We had to adjust the factors to  
13 account for that. The pole loading factor for --  
14 sorry. It just took me a minute.

15 Q. That's okay.

16 A. On page 16, Bates stamped, Column F is your  
17 pole factor. And it's applied to your aerial  
18 cable. And the factor is listed as [REDACTED] That  
19 includes the sharing of [REDACTED] And that does  
20 not mean -- it's just a coincidence that it's  
21 [REDACTED] Internal to that factor we have adjusted so  
22 that it's [REDACTED] percent sharing.

23 The reduced trenching cost would have been  
24 adjusted in the in-plant factor for buried cable,  
25 and that is found on page 15. And the conduit --

SHUGART &amp; BISHOP

44

1 since we use a loading factor, that's not a big  
2 driver in this particular environment.

3 Q. So the reduced installation cost of the  
4 conduit, that's not on a specific --

5 A. The only place that would at all be  
6 indicated is on page 16 under Column H. You have a  
7 conduit loading factor against your underground  
8 cable. It's just I'm saying it's not a big driver  
9 in this particular case.

10 Q. And item 5, where would that be found?

11 A. That's internal to the loop model where you  
12 applied the field factors to the cable as well as to  
13 the digital loop carrier.

14 Q. And item 6 on the next page?

15 A. Not a lot of labor rates in this particular  
16 study. It's not Bates stamped. Or I can't find  
17 it. But in the package that I'm looking at, it's  
18 four pages into the study. The page we talked about  
19 previously.

20 Q. Right. That's the same page that has the  
21 various costs including other costs in the center of  
22 the page. Correct?

23 A. Correct. There is a column called direct  
24 level localized labor rate. There is no shared  
25 component in there. And also we have gone in and

SHUGART &amp; BISHOP

45

1 adjusted those rates to reflect the 2.5 percent year  
2 over year that the Commission ordered.

3 Q. While we're on that page 4, at the top  
4 left-hand side it talks about job grade and then job  
5 description and head count and available annual  
6 hours. Can you tell me why all of these people are  
7 involved in pay phones?

8 A. I can't name every one. I can give a  
9 general description for some of the categories.

10 Q. Please, ma'am.

11 A. The product management individuals would be  
12 responsible for the pay phone service that we  
13 provide, both PTAS and SmartLine that we're dealing  
14 with. So that's your first two categories. The  
15 market manager, I can't answer that one. The  
16 pricing, that would be the person responsible for  
17 setting up the tariffs, looking at getting things  
18 filed with the Commission, that type individual.

19 Cost matters, that would be the individuals  
20 in my department where they're actually working on  
21 the cost studies, particularly in the time frame  
22 that we're looking at here. We're looking at over  
23 the time frame developing the cost studies to  
24 support the various filings.

25 And then any cost work that the product

SHUGART & BISHOP

46

1 manager might need at any time to look at his  
2 product. Then you have sales individuals that  
3 actually work with the customers that are actually  
4 account execs for the different pay phone  
5 companies -- or I guess the right word is pay phone  
6 providers -- that we deal with.

7 These are BST employees that handle selling  
8 to our pay phone providers. Systems designers work  
9 with them. I can't give any more definition on  
10 that.

11 Q. Thank you, ma'am. Look, please, ma'am, at  
12 your direct testimony on page 11, line 17. It  
13 actually goes over onto the next page for three  
14 pages. I mean for three lines. Excuse me. Can you  
15 describe for me, please, the detail adjustments made  
16 to make it cost specific to pay phone services; and  
17 if so, where would we find that in DDC-1?

18 A. When we studied the unbundled loop and port  
19 in the UNE docket, we considered them standalone  
20 components, which meant they were not connected  
21 together. They terminated on the main distribution  
22 frame.

23 So what you need to do is -- if I am going  
24 to be working with a service such as pay phone that  
25 allows the loop and the port to be put together as

SHUGART &amp; BISHOP

47

1 one continuous circuit, then I must make some  
2 adjustment to my starting network components which  
3 were my underlying UNES.

4 So what I did was -- in the underlying UNES  
5 you had an MDF termination for each. So I removed  
6 the MDF termination from the loop and zeroed it out  
7 because you don't need it. The next adjustment was  
8 to go in the digital loop carrier file and make the  
9 adjustment so that it allows 100 percent integration  
10 into the switch.

11 So what we did was at that point to  
12 allow -- excuse me. I don't think it's 100 percent  
13 integration in this particular study. It's some  
14 percentage less than that, whatever was at that time  
15 available in the network and projected going  
16 forward.

17 So we adjusted that so that when digital  
18 loop carrier is used on that loop, that loop is  
19 allowed to be integrated directly into the switch.  
20 And those adjustments are made internal to the loop  
21 model itself, into the loop carrier file, etcetera.

22 You would not see them in this particular  
23 docket. That is in the loop model itself.

24 Q. Are those available, the changes that were  
25 made?

SHUGART &amp; BISHOP

48

1 A. I don't know how they print out. It's been  
2 a while since I looked at the loop model to see how  
3 they could print to provide them.

4 MR. PICKERING: Counsel, I would ask  
5 that, if she can without having to reconstruct  
6 something, look at those and if they are  
7 available, if you would kindly make those  
8 available to us.

9 MR. KITCHINGS: If available, we will  
10 make them available.

11 MR. PICKERING: Thank you.

12 BY MR. PICKERING:

13 Q. I think you stated that you subtracted out  
14 the MDF from the loop?

15 A. Correct.

16 Q. What amount would that be? Do we know  
17 that?

18 A. That I don't remember.

19 Q. Again, that would be available?

20 A. It's available in the same other file that  
21 we were just talking about, if I can produce that.

22 Q. Okay. Thank you very much. Would the same  
23 thing be true basically for the universal digital  
24 loop carrier? Would that be the same thing?

25 A. Yes.

SHUGART & BISHOP

49

1 Q. So those would all be in whatever numbers  
2 were used --

3 A. Correct.

4 Q. -- that are not part of the DDC-1?

5 A. Correct. They are reflected in the digital  
6 loop carrier. The change is already reflected in  
7 the digital loop carrier numbers provided here.

8 Q. The dollar amount that would have been  
9 deducted for the MDF and for the loop carrier, would  
10 those likewise be in those work papers?

11 A. In those work papers you're not going to  
12 see the dollar amount that's been deducted. What  
13 you see is the after effect of these changes. I  
14 mean you see the MDF set to zero on that sheet of  
15 paper. And you would see the digital loop carrier  
16 file reflecting a certain percentage of the time you  
17 would not need a central office terminal.

18 So those files would be the output. I  
19 don't have a before and after run.

20 Q. All right. Thank you, ma'am. On page 12  
21 of your pre-file testimony, I'm referring to line 7  
22 through 13 wherein it refers to the reasonable level  
23 of contribution toward the joint and common cost of  
24 the corporation. What does that really mean?

25 A. That when you set your rate, your rate

SHUGART &amp; BISHOP

50

1 should be above your TSLRIC cost, that the  
2 difference is defined as your contribution, and that  
3 you are making a contribution to the joint and  
4 common overhead of the firm.

5 Q. Would that commonly be referred to as  
6 overhead?

7 A. I think I have used those terms  
8 interchangeably.

9 Q. And the question is: What makes it a  
10 reasonable level of contribution? What is meant by  
11 reasonable level of contribution?

12 A. I believe in terms that as long as you are  
13 making some contribution to your joint and common  
14 costs. And then the level of that amount is really  
15 measured by the market, customer willingness to pay,  
16 what the market will bear, the things we've talked  
17 about before. There is no miracle dollar amount or  
18 percentage for reasonable.

19 Q. If a reasonable level is what a willing  
20 buyer is willing to pay, is there such a thing as an  
21 unreasonable level?

22 A. I believe in that context there wouldn't be  
23 because basically the customer is not going to pay  
24 more than the customer is willing to pay. So they  
25 would never pay an unreasonable amount.

SHUGART &amp; BISHOP

51

1 Q. But the customer wouldn't know what portion  
2 they were paying of overhead, would they?

3 A. They wouldn't know, but that doesn't  
4 matter. They only know the rate that they pay, and  
5 they're comparing what value they're getting and  
6 what else they're seeing in the market.

7 Q. I understand that. But they wouldn't know  
8 what the overhead rate was calculated in that price?

9 A. No. They wouldn't need to.

10 Q. On the same page, please, ma'am, on  
11 lines 22 and 23, we talk about PTAS and SmartLines  
12 are retail services, not unbundled network  
13 elements. What do you mean when you refer to  
14 retail?

15 A. They are actual services that we are  
16 providing to a customer, and market those particular  
17 services.

18 Q. So to provide lines to a pay phone service  
19 provider, you look at that as a retail service?

20 A. Yes, I do.

21 Q. What is the retail cost on -- is there a  
22 retail cost set out in the cost test?

23 A. Yes. When we talked about the product  
24 management and the sales items that we've been  
25 talking about on that page, those are examples of

SHUGART & BISHOP

52

1 the retail cost associated --

2 Q. That would have been on page 4 that you and  
3 I were referring to? It's an unnumbered page, but  
4 it's the fourth one in the packet. Is that correct?  
5 Or is it the third?

6 A. It's the actual fourth page in the package.

7 Q. And what's the title on top of that page?

8 A. Pay Phone Product Line Cost.

9 Q. And that's what we've been referring to  
10 previously?

11 A. Yes.

12 Q. Does that sheet contain all of the retail  
13 costs associated with pay phones?

14 A. Yes. Those are our retail costs we've  
15 identified for pay phone.

16 Q. On page 13, the question will have  
17 reference to lines 6 through 13. Explain for me,  
18 please, ma'am, why it's appropriate to make  
19 adjustments ordered for a TELRIC study when  
20 conducting a TSLRIC study?

21 A. In this particular case the adjustments,  
22 all the ones we've been talking about, cost of  
23 money, etcetera, I don't think it's so much TELRIC  
24 adjustments to a TSLRIC methodology as it is, as I  
25 defined earlier, your inputs that are common to both

SHUGART & BISHOP

53

1 studies, such field factors, cost of money,  
2 depreciation.

3 Those particular items, the Commission had  
4 just ruled on. And we did not see that we would go  
5 back and argue those same particular issues again  
6 with the Commission since they had just recently  
7 issued an Order. Even though it wasn't a TELRIC  
8 document, those type inputs would be similar.

9 Q. As a cost analyst, is the New Services Test  
10 equivalent to a requirement that rates be cost  
11 based?

12 MR. KITCHINGS: I object to that. I  
13 think it's beyond the scope of the testimony.  
14 But she can answer if she knows.

15 A. I don't know.

16 Q. Would you describe to me, please, ma'am,  
17 the forward-looking economics cost methodology  
18 consistent with the principles in the FCC's First  
19 Report and Order relative to pay phones? I'm  
20 sorry. Let me restate the question.

21 Would you describe a forward-looking  
22 economic cost methodology consistent with the  
23 principles of the FCC's First Report and Order?

24 A. The First Report and Order referring to the  
25 August 8th Order associated with -- it's the

SHUGART & BISHOP

54

1 August 8th Order. I don't remember what it was  
2 associated with.

3 Q. Yes, ma'am.

4 A. All right. Now rephrase it, and I'll know  
5 exactly which one.

6 Q. Okay. Describe for me, please, a  
7 forward-looking economic cost methodology consistent  
8 with the principles of that First Report and Order.

9 A. In general terms what the FCC defined was a  
10 methodology that looks at providing a wholesale  
11 network. That means there are no retail costs  
12 included. And you are providing components of the  
13 network to individual competitive local exchange  
14 providers.

15 So you use a forward-looking network to  
16 cost out a wholesale narrow band network to provide  
17 unbundled network elements. And you basically  
18 develop the network using currently available  
19 technology forward-looking, and you assume the  
20 existing wire center locations and build a network  
21 from that standpoint.

22 Q. Is that a TELRIC methodology?

23 A. Yes, that's TELRIC.

24 Q. Could it also be a TSLRIC methodology?

25 A. Certain components of it can be a TSLRIC

SHUGART & BISHOP

55

1 methodology. You can start with looking at the -  
2 underlying loop. But as I mentioned earlier, you  
3 need to make adjustments so that when you're  
4 studying a TSLRIC study, certain costs are direct  
5 and other costs are shared.

6 When you move to the TELRIC environment,  
7 some of those costs that were shared by services are  
8 now direct to individual network components.

9 Q. Describe for me the ways that the cost  
10 study that you have provided would be different from  
11 one developed consistent with the principles of that  
12 First Report and Order.

13 A. Let me just talk in terms of what we've  
14 done here. I believe that, first of all, we defined  
15 our cost component to be a pay phone service. So we  
16 looked at pay phone characteristics such as usage  
17 data, which we talked about, and also the loop  
18 length that I adjusted by the residence-business  
19 mix. You also would include your retail cost.

20 I think one of the biggest differences -- I  
21 didn't mention it when I talked about TELRIC. The  
22 FCC Report and Order defines TELRIC, total element  
23 long run incremental cost, as all of the direct  
24 costs plus shared costs. And then in addition to  
25 that, it says that you can assign to that a -- I

SEUGART &amp; BISHOP

56

1 think the actual term is reasonable projection of  
2 common overhead or common cost to the firm.

3 So there's a common cost added in the  
4 TELRIC world. When I did the TSLRIC study, I do not  
5 include shared and do not include common. I stop at  
6 the direct cost component.

7 Q. If you know, would you describe for me the  
8 methodology used by BellSouth to determine the  
9 overhead cost that is included in the existing rates  
10 for pay phone services?

11 A. No, I cannot answer that question.

12 Q. Are the overhead amounts in the existing  
13 rates for pay phone services based on the cost of  
14 providing those services?

15 A. I do not know what those overheads are.

16 Q. Do the existing rates for pay phone  
17 services provide a subsidy to any other services  
18 provided by BellSouth?

19 A. Only thing that I'm aware of at all would  
20 be the implicit subsidy for universal service that  
21 we did discuss earlier. But I believe Mr. Sanders  
22 would know more about that issue.

23 Q. What services would you consider to be  
24 comparable that are offered by BellSouth to pay  
25 phone services from a comparable cost standpoint?

SHUGART & BISHOP

57

1 A. I don't really know or else I just don't  
2 understand the question.

3 Q. Are there other services rendered by  
4 BellSouth that you would consider to be comparable  
5 to pay phone services?

6 A. I think I need to defer that one to  
7 Mr. Sanders.

8 Q. Are the costs in the cost study  
9 jurisdictionally separated costs or total cost?

10 A. Total cost. Non-separated.

11 Q. Explain for me, please, ma'am, how other  
12 sources of revenue, specifically SLC, PICC, and CCL,  
13 were considered when the existing pay phone rates  
14 were developed, if you know.

15 A. I do not know.

16 Q. How have you considered the SLC, PICC, and  
17 CCL revenue sources in your calculations of the cost  
18 study?

19 A. There are no revenues included in my cost  
20 study. This is the cost. Just the cost.

21 MR. PICKERING: Counsel, may we take  
22 about a two-minute break?

23 MR. KITCHINGS: Perfect timing.

24 (A recess was taken.)

25 BY MR. PICKERING:

SHUGART & BISHOP

58

1 Q. Just a few more questions.

2 A. Okay.

3 Q. Help me, if you can, as to what the  
4 differences are between the South Carolina PTAS  
5 study and the Louisiana PTAS study.

6 A. I'm trying to remember. In the South  
7 Carolina study, we again made all the adjustments  
8 that the Commission had ordered in the UNE  
9 environment, or the unbundled network element  
10 environment. And we also made the digital loop  
11 carrier and MDF adjustments that we talked about to  
12 allow for integration into the switch.

13 Those adjustments were made. They're  
14 similar between the two states. To the best of my  
15 recollection, in North Carolina we did not include  
16 any of the product management, the retail  
17 offerings -- excuse me -- the retail cost associated  
18 with the pay phone offerings. And those were not  
19 included.

20 Rather, instead we developed a cost from  
21 the unbundled network element environment that  
22 showed the direct cost and also showed what the  
23 shared and common component would have been if it  
24 had been calculated like the unbundled network  
25 element shared and common amount as a separate item.

SHUGART & BISHOP

59

1 Q. On page 4, I think what you have just told  
2 me is that you did not include the other cost items  
3 in the South Carolina study?

4 A. To the best of my recollection, that's  
5 correct.

6 Q. Why not?

7 A. When we went into the South Carolina  
8 environment, we were looking at just having finished  
9 the generic cost docket. And it was felt that we  
10 would use that as the foundation and then pick up --  
11 the contribution would be sufficient enough to cover  
12 any of these costs without actually having  
13 calculated them.

14 Q. What contribution?

15 A. The contribution in the rate less the  
16 direct cost.

17 Q. As I understand it, you put the shared and  
18 the common in the South Carolina study but not in  
19 the Louisiana study. Help me as to why not.

20 A. All we did was show what that amount would  
21 be. I do not consider that as the appropriate thing  
22 to have done. And shared and common calculated from  
23 the UNE environment is not something that should be  
24 used in determining whether or not pay phone passes  
25 the New Services Test.

SHUGART &amp; BISHOP

60

1           So it is not viable in the Louisiana  
2 environment to show that number.

3           Q.     Should it be used to show whether or not it  
4 is cost based --

5           A.     I do not believe so.

6           Q.     -- rate? You don't believe so?

7           A.     I do not believe so.

8           Q.     Why not?

9           A.     Because again, cost based -- the definition  
10 I've been using is the that cost base is you have a  
11 cost of what it incurred -- excuse me -- of what the  
12 company incurred to provide the service. And then a  
13 contribution above that is fine. You're still at  
14 cost based as long as you're recovering your cost.  
15 It's the foundation.

16          Q.     Does BellSouth incur shared and common  
17 costs when providing a service rather than an  
18 unbundled network?

19          A.     BellSouth has shared and common costs that  
20 are not directly assigned to any service. I think  
21 the difference is when you look at an unbundled  
22 network element, costs that when you're looking at  
23 the service environment would be shared among  
24 services -- say, for instance, you have a loop. And  
25 in your loop world you have ESSX service, you have

SHUGART & BISHOP

61

1 pay phone service, you have residence service, you  
2 have business service. All of those services have  
3 shared cost.

4 But when I'm studying a loop, the unbundled  
5 loop, I've changed my cost component to a network  
6 element. And when I do that, costs that were shared  
7 in the service environment now become direct cost of  
8 providing the network component.

9 Q. You incur shared and common costs both for  
10 a UNE and for any other services. Correct?

11 A. Yes. You have shared costs in your  
12 environment. All I'm saying is that the shared  
13 component that's calculated in the unbundled network  
14 element environment, those are defined as direct.  
15 They become direct by definition of TELRIC.

16 Q. Could you make the calculation on shared  
17 and common cost for a service?

18 A. I don't think that's the appropriate thing  
19 to do because all I'm doing is determining the price  
20 not to charge below.

21 Q. I understand that. But can you calculate  
22 those costs?

23 A. You could calculate, using the same type of  
24 allocation that was in the unbundled network element  
25 environment world. But again, that's inappropriate.

SHUGART &amp; BISHOP

62

1 Q. How would you determine whether a given  
2 rate produces a contribution to a shared and common  
3 cost that is reasonable?

4 A. I believe that's the same type question we  
5 discussed before in terms of as long as you're  
6 covering your costs and you have the customer  
7 willingness to pay, therefore you have a  
8 contribution. And it's a contribution to shared and  
9 common. There is no miracle number for measurement  
10 for reasonable.

11 Q. Can it be done by considering the cost of  
12 the services directly rather than by comparing it to  
13 other services?

14 A. I don't know about that. I either didn't  
15 understand or I just don't know.

16 MR. PICKERING: I don't have any  
17 other questions, Counsel. Thank you very much.  
18 Appreciate your time.

19 MR. KITCHINGS: Thank you,  
20 Ms. Caldwell.

21 (Concluded at 3:45 p.m.)
